This steering is a hydraulic power steering with a semi-integral (follow-up mechanical) lock-up which causes steering to be more of power failure.

The flow divider provides a priority flow to the steering system for straight, responsive control under all operating conditions, even at low engine speeds.

The steering control valve features a reaction chamber which senses steering load to provide the operator a minimum full feel at all times.

The steering pressure is regulated by the relief valve built in the flow divider.

For the flow divider and relief valve, refer to HYDRAULIC SYSTEM.
