production in the vector boson fusion mode where the Higgs decays to b quarks the most common decay channel at the LHC
The vector boson fusion mode in which the Higgs is produced simultaneously with a pair of quark jets provides an
unparalleled opportunity to study the detailed properties of the Higgs including the possibility of parity and CP violation as
well as its couplings and mass It thus opens up this new field of study for precision investigation as the LHC increases in
energy and intensity leading the way to this new and exciting arena of precision Higgs research *The School World* ,1908
