HEALTH PSYCHOLOGY

Health psychology is the branch of psychology that studies the associations between health and individual behaviors, cognitions, and affect. Health psychology operates from the biopsychosocial model as opposed to the traditional biomedical model. Health psychology overlaps with behavioral medicine, public health, psychiatry, and other areas of psychology.

HISTORY OF HEALTH PSYCHOLOGY

- As early as the 1900s, death was caused mostly by acute, infectious diseases contracted by accidental behaviors such as inhaling air with a pathogen or touching an object with a pathogen on its surface, such as:

 - Diseases causing diarrhea and other gastrointestinal problems
 - Bubonic plague, measles, diphtheria
- Today deaths are more likely to be caused by chronic diseases (e.g., cancer and cardiovascular

diseases) which are not easily cured with antibiotics or other medications.

- Health care workers have consistently noted a relationship between health and behavior.
- Using medical care rates and the rise of the biopsychosocial model led to idea that health could be determined by behavior.
- Health psychology came to the fore in 1995, with Division 38 (Health Psychology) of the American Psychological Association.
