complements and extends the scope of the first with the biological viewpoint being stressed Following an introductory chapter on design as understood in biology the various aspects of the biological information revolution are addressed Areas discussed include molecular structure the genome development and neural networks A section on information theory provides a link with engineering and the scope is also broadened to include the implications of motion in nature and engineering

The War on Cancer Guy B. Faguet, 2008-11-23 After reviewing the history of cancer and its impact on the population Dr Faguet exposes the antiquated notions that have driven cancer drug development documents the stagnation in treatment outcomes despite major advances in cancer genomics and growing NCI budgets and identifies the multiple factors that sustain the status quo He shows that contrary to frequent announcements of breakthroughs our current cancer control model cannot eradicate most cancers and the reasons why Significantly this book also delineates a way forward via a shift from the discredited cell kill approach of the past to an integrated evidence driven cancer control paradigm based on prevention early diagnosis and pharmacogenomics The author's views are based on data published in mainstream scientific journals and other reliable references 432 of which are cited
