More than Don't Let 'em Win DC Vesser,2020-01-21 This book attacks a poison that for so very long we have called political correctness Political correctness PC is the act of avoiding expression or language that can perceptively be construed as marginalizing by specific minorities or demographic groups It is often difficult to argue against PC because supporters of PC are likely to claim that contrary to using PC one would instead use expressions or language that offends which is oft what I wind up doing This response is a false conflation of permitting and condoning but the fallaciousness usually doesn t deter those who want to win the argument It s easy to accuse someone of simply seeking justification to use epithets in order to put him on the defensive and into the unenviable position of having to assert that he s not a racist It s also dirty and hateful to do so and that s how such responses should be considered We also review Agenda 21 Document 7277 the Illuminati the Club of Rome and the Committee of 300 in brevity We discuss the New World Order and speculate about megaregions and their locations both in the United States and abroad We take a very long train ride from the most southern tip of South America all the way to New Zealand and we discuss possibilities for a likely location for the capital of the world that may surprise you We even speculate about a location right here in the United States for a habitat for useless eaters We discuss how close we have come in our society to achieve all the goals of the New World Order I really hope you enjoy the read

*Generative Adversarial Networks for Image-to-Image Translation* Arun Solanki,Anand Nayyar,Mohd Naved,2021-06-22 Generative Adversarial Networks GAN

have started a revolution in Deep Learning and today GAN is one of the most researched topics in Artificial Intelligence. Generative Adversarial Networks for Image to Image Translation provides a comprehensive overview of the GAN (Generative Adversarial Network) concept starting from the original GAN network to various GAN based systems such as Deep Convolutional GANs (DCGANs), Conditional GANs (cGANs), StackGAN, Wasserstein GANs (WGAN), cyclical GANs and many more. The book also provides readers with detailed real world applications and common projects built using the GAN system with respective Python code. A typical GAN system consists of two neural networks i.e. generator and discriminator. Both of these networks contest with each other similar to game theory. The generator is responsible for generating quality images that should resemble ground truth and the discriminator is accountable for identifying whether the generated image is a real image or a fake image generated by the generator. Being one of the unsupervised learning based architectures, GAN is a preferred method in cases where labeled data is not available. GAN can generate high quality images of human faces developed from several sketches, convert images from one domain to another, enhance images, combine an image with the style of another image, change the appearance of a human face image to show the effects in the progression of aging, generate images from text and many more applications. GAN is helpful in generating output very close to the output generated by humans in a fraction of second and it can efficiently produce high quality music, speech and images. Introduces the concept of Generative Adversarial Networks (GAN) including the basics of Generative Modelling, Deep Learning, Autoencoders and advanced topics in GAN. Demonstrates GANs for a wide variety of applications including image generation, Big Data and data analytics, cloud computing, digital transformation, E-Commerce and Artistic Neural Networks. Includes a wide variety of biomedical and scientific applications including unsupervised learning, natural language processing, pattern recognition, image and video processing and disease diagnosis. Provides a robust set of methods that will help readers to appropriately and judiciously use the suitable GANs for their applications.
