The History of Western Palearctic Falcons Giovanni Leonardi, 2025-04-22 Falcons have been exploited by humans as food source, ornamental purposes, or for the falconry practices. There is a large historical literature in which falcons were often mentioned but always along broader topics, mainly ancient falconry and poetry. This book is the result of a parallel project developed during the preparation of *Behavioral Ecology of Western Palearctic falcons* published by Springer in 2020. The main aim is to use archaeological and historical sources on falcons to delineate the past distribution and population ecology of these predators in the Western Palearctic ecozone. Ultimately, the approach to the data is aimed at defining the population dynamics of falcons over time. The relationship conflict with human populations is also placed in this context. By putting falcons as a central subject of study, this book outlines their path in the Western Palearctic from the Pleistocene to modern ornithology.

Backpacker, 2001-10 Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature, and product innovation, has become the gold standard against which all other outdoor industry awards are measured.

Behavioural Ecology of Western Palearctic Falcons Giovanni Leonardi, 2020-12-07 This monograph is the result of eight years of bibliographical and field research concerning several behavioural ecology aspects of the Palearctic falcons. For a while, this book grew along with *The Lanner falcon* published in 2015 and revised in 2017. In both books, the main aim was to provide a clear overview of the biology and ecology of these species. In fact, in the last 20 years, the number of publications on falcons has grown tremendously, and in parallel, also those belonging to the so-called grey literature. The number of people involved is also increased by including both academics and nature lovers. Many previously published books emphasized identification and offered little insights on the behavioural and ecological aspects of the species. Very often, the research on behavioural ecology remains closed within the confines of the academic community. By contrast, a multitude of basic data is scattered in countless articles published in local magazines. Many falcon species are easy to observe and study, such as kestrels, but others are more rare and localized. In order to understand the survival strategies adopted by this group of avian predators, it is necessary not to lose sight of the overall picture. This book tries to explain the different survival strategies by examining through a few essential chapters some crucial aspects for all species. The first chapter provides information on the genus *Falco*, its genetics, evolution, and morphological peculiarities. The other chapters deal with reproductive strategies, competition, exploitation of resources, dispersal patterns, communication, and sociality. One of the main objectives of this book is to produce an accessible but scholarly curated source.

of reference By understanding the most common species it is possible to provide a working framework for rarer and especially threatened falcon species
