HAMMER TYPE

Multi-Impact Spring Hammer

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (20-100 mesh). Based on the unique, spring-type hammer, feeding of these single components at the point of impact and rotating of high speed, vertical shafts, under the hammer, with automatic, adjustable, low resistance, spring-mounted control breaker plates in the hammer and feed screws that the feed rate amount of pulverizing is varied up or down to the material being fed to maintain the crushing grade, thereby increasing wear on the hammers and grates.

These compact, sturdy built, unit hammer bearing machines are made in six sizes to reduce 10" to 24" material to the desired particle in one operation. High percentage of fine work rates are produced — discharge ports for granules are set to suit applications. They also be equipped either gear box or direct drive, suitable, mechanical bearing surfaces are easily accessible.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rates

The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Traulsen design of ball feed and control mechanism fitted to these crushers eliminates feeding and grinding between crushing faces.

The construction is uncomplicated and easy to handle after bearings, and the eccentric shaft shaft and gears are all mounted in oil with buffer oil circulating pump served for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

Traulsen 'TY' and 'TZ'

Fine Reduction — Excellent Product
High Speed — Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Traulsen Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both fine screen and ball sizes. They are designed to handle materials of maximum size, greater efficiency and very economical in operation. The three — all unit heavy, self-aligning, ball feed and control mechanism or allowed before discharge without discharge and a self-regulated mechanism internally fitted with roller bearings.

The same capacity and efficiency of Traulsen Gyration Crushers is due to the advanced design of the ball feed and control mechanism.

Crushing is assisted by increasing the capacity of each crushing feeding zone — power requirements are reduced, even at fine settings for grinding a grade just below the screen, combined in a direct crushing form. The reduced clearance between material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being broken, they should be formed of elastic material to gradually rise the larger material in the feed.

These rolls will take fine feeds of crushing rolls for combining stages of service industry. They are usually set for an even feed, which enables them to crush and split. Roll shafts can be set in compression feed, driven and/or driven roll, or may be other, usually fixed, compressed or rolled, according to the service required.

Roller buffers or springs are fitted to provide the necessary crushing pressure and protect the movable roll in case of should undesirable substances enter the machine.
