Keith A. Markus,Denny Borsboom,2013-06-19 This book examines test validity in the behavioral social and educational sciences by exploring three fundamental problems measurement causation and meaning Psychometric and philosophical perspectives receive attention along with unresolved issues The authors explore how measurement is conceived from both the classical and modern perspectives The importance of understanding the underlying concepts as well as the practical challenges of test construction and use receive emphasis throughout The book summarizes the current state of the test validity theory field Necessary background on test theory and statistics is presented as a conceptual overview where needed Each chapter begins with an overview of key material reviewed in previous chapters concludes with a list of suggested readings and features boxes with examples that connect theory to practice These examples reflect actual situations that occurred in psychology education and other disciplines in the US and around the globe bringing theory to life Critical thinking questions related to the boxed material engage and challenge readers A few examples include What is the difference between intelligence and IQ Can people disagree on issues of value but agree on issues of test validity Is it possible to ask the same question in two different languages The first part of the book contrasts theories of measurement as applied to the validity of behavioral science measures The next part considers causal theories of measurement in relation to alternatives

**Witnessing a Wounded World** Timothy Middleton, 2025-11-04 A crucial intervention at the intersection of ecotheology and trauma theology We are in the midst of a global ecological crisis At times the scale of the suffering involved can be hard to fully comprehend The whole planetary ecosystem feels out of kilter Meanwhile trauma theorists and society at large have become increasingly aware of the incidence of trauma in a growing variety of contexts In *Witnessing a Wounded World* Timothy Middleton asks what might be gained by viewing ecological suffering through the lens of trauma By bringing concepts and methodologies from trauma theology to bear on questions that arise within ecotheology Middleton engages a series of pressing questions What kind of traumas are being precipitated by anthropogenic climate change and accelerating biodiversity loss What would it mean to envisage the Earth itself as traumatized And how might a Christian theologian respond From large scale deforestation and opencast mining to rampaging wildfires and fracturing ice sheets the Earth itself is subject to intense devastation *Witnessing a Wounded World* analyzes such phenomena in terms of three traumatic ruptures to communication to flesh and to time Drawing on practices of witnessing and the insights of deep incarnation Christologies Middleton proceeds to offer a theological account of this ecological trauma For Christians a model of Christic witnessing can bring the Earth s suffering to light As the first sustained treatment of ecological trauma to address the trauma of the Earth itself *Witnessing a Wounded World* makes a profound contribution to discussions of suffering faith and the present ecological emergency

**Quantitative Risk Assessment** James M. Humber, Robert F. Almeder, 1987-05-15 The National Science Foundation The National Institute of Occupational Safety and Health and the Center for Technology and Humanities at Georgia State University sponsored a two day national conference on Moral Issues and Public Policy Issues in the Use of the Method of Quantitative Risk Assessment QRA on September 26 and 27 1985 in Atlanta Georgia The purpose of the conference was to promote discussion among practicing risk assessors senior government health officials extensively involved in the practice of QRA and moral philosophers familiar with the method The conference was motivated by the disturbing fact that distinguished scientists ostensibly employing the same method of quantitative risk assessment to the same substances conclude to widely varying and mutually exclusive assessments of safety depending on which of the various assumptions they employ when using the method In short the conference was motivated by widespread concern over the fact that QRA often yields results that are quite controversial and frequently contested by some who in professedly using the same method manage to arrive at significantly different estimates of risk
