Diesel Engines Cuthbert Coulson Pounder, 1998 Since its first appearance in 1950 Pounder's Marine Diesel Engines has served seagoing engineers students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine. This new edition has been completely re written and re structured while retaining the directness of approach and attention to essential detail that characterised its predecessors. There are new sections covering principles and theory and engine selection and important developments such as the use of high speed diesel engines for instance in fast ferry craft are treated in full. In addition numerous illustrations of all the listed types of engines appear in their relevant chapters. *Materials and Technologies for Future Advancement* Azman Ismail, Fatin Nur Zulkipli, Syajaratunnur Yaakup, Andreas Öchsner, 2023-10-07 This book is a platform to publish new progress in the field of materials and technologies that can offer significant developments with the possibility of changing the future. These emerging developments will change the way we live now at an unprecedented pace across our society. It is important to note that such modern developments are no longer restricted to a single discipline but are the outcome of a multidisciplinary approach which combines many different engineering disciplines. This book explores the new technology landscape that will have the direct impact on production related sectors individually and in combination with different disciplines. A major driver for this actual research is the efficiency many times connected with a focus on environmental sustainability. **Advances in Marine**
