Ocean Engineering Science Bernard Le Méhauté, Daniel M. Hanes, 2005-06-28 *Contemporary Research in Engineering Science* Romesh C. Batra, 2012-12-06 Fatigue failures occur in aerospace marine nuclear structures and automobile components from initiation and propagation of cracks from holes scratches or defects in the material To design against these failures crack propagation life and fracture strength need to be accurately predicted It is reported in the literature that these failures often initiate as surface cracks corner cracks and cracks emanating from fastener holes Such cracks are with elliptic or nearly elliptic in shapes The deviation from elliptic shape is due to varying constraint effect along the crack front Even in situations when the cracks are through the thickness of the material there would be thicknesswise variation of constraint effects leading to three dimensional nature of crack growth Accurate predictions of the crack growth in these cases by numerical methods can be made only by solving three dimensional boundary value problems Empirical relationships have been developed 1 based on Linear Elastic Fracture Mechanics over years describing fatigue crack growth response Some of these empirical relationships required modifications in the later stages to meet the design applications The Crack closure phenomenon discovered by Elber 2 3 during the crack growth phase is mainly attributed to the local material yielding near the crack tip and the consequent residual plastic wake behind the crack tip It helped considerably in understanding several aspects of fatigue crack growth and rewrite these relations **Recent Trends in Engineering, Science and Technology** Jyoti Sekhar Banerjee, Siddhartha Bhattacharyya, Debashis De, Jinia Datta, Panagiotis Sarigiannidis, Jan Platos, Muhammad Mujtaba Asad, 2025-08-19 AIEST is a leading conference focused on providing a platform to researchers scholars engineers scientists and industrial professionals to gather knowledge and bridge the gap between academia and its industrial aspects around the world This conference will be an immersive experience primarily focusing on the latest advancements and researchers in various fields of engineering including but not limited to Mechanical Engineering Civil Engineering Electrical Engineering Electronics and Communications Engineering Computer Science Engineering Information Technology and other interdisciplinary areas AIEST will cater to the transitional practices where industrial knowledge would be conveyed to academia regarding real time scenarios and practical findings thus fostering collaboration and the development of innovative solutions to counter contemporary challenges in engineering and technology *CRC Handbook of Tables for Applied Engineering Science* Ray E.
