Design of Work in Automated Manufacturing Systems T. Martin, 2014-05-17 *Design of Work in Automated Manufacturing Systems* focuses on the need to improve the working conditions in the workplace while at the same time putting emphasis on the use of technologies in various industries. The book takes into account how automation has altered the operations of small and medium sized firms. The text then presents a comparison of the use of computer controlled applications in different countries and industries as well as how these applications have influenced the working conditions of workers as well as the division of work in the workplace. The changes that manufacturing industries have undergone and the adjustments that were made in adopting the use of automated manufacturing systems are also highlighted. Also noted are the changes that computer aided production systems have done on engineering including the observation that workers can effectively work in an environment that is partially controlled by computer controlled applications. However the text also notes that organizational problems have evolved in firms that have adopted computer controlled applications. The book can be a source of information for social scientists and those involved in developing computer controlled applications in organizations.
