Finger Prints Research

History of finger prints

It is believed that the chinese were the first to use finger prints to identify individuals without realizing that how unique these marks were, there are documents that were signed three thousand years ago by Chinese culture using finger prints.

William Herschel was an English civil servant who worked at a tea company in India and his job was to recruit Indians to harvest tea, to do this he had to make them sign a contract, the problem was that they didn't know how to write their names, so he had them signed by putting their right hand in ink and pressing it to the paper.

It wasn't until the year 1892 that Francis Galton (considered the god father of finger prints) wrote the book "Finger Prints" in which he discussed the anatomy of finger prints and suggested methods for recording them, he was the first individual who came up with the three classifications of finger prints the loops, whorls, and arches which I will talk about in later on, he also laid down the laws of finger prints which say that no two finger prints are the same and that a finger print of an individual remain unchanged.

In the early 19's the US began to use finger prints as an efficient way to identify individuals followed by the whole world until now, nowadays we use finger prints in almost every aspect of our lives that need authentication and identification from unlocking our smart phones to identifying victims and criminal in a police investigation.

How is it that every one of us has a unique finger print?

Finger print is considered a very efficient way to identify individuals because every individual has his own unique finger print, in fact even identical twins who have the same DNA have different finger prints and the reason why is that finger prints are created while the baby is his mother's whom, the pressure of the fluid inside the whom on the surface of the hands and finger tips influences the formation of patterns and with so many factors which determine the shapes of these patterns every ones finger prints are unique.

   Lee and Gaensslen's Advances in Fingerprint Technology Robert Ramotowski,2012-10-18 Reflecting new discoveries in fingerprint science Lee and Gaensslen s Advances in Fingerprint Technology Third Edition has been completely updated with new material and nearly double the references contained in the previous edition The book begins with a detailed review of current widely used development techniques as well as some older histo   *Fingerprint Detection with Lasers, Second Edition,* Menzel,1999-03-03 Offers up to date treatment of fingerprint detection with lasers including basic principles and equipment established photoluminescence based detection techniques and a range of emerging techniques This second edition summarizes information on time resolved fingerprint detection transition selection rules image intensifiers and CCD cameras uses of photoluminescence in criminalistics and scientific principles underlying figerprint detection   **Forensic Fingerprints** Max M. Houck,2016-02-03 Forensic Fingerprints the latest in the Advanced Forensic Science Series which grew out of the recommendations from the 2009 NAS Report Strengthening Forensic Science A Path Forward serves as a graduate level text for those studying and teaching fingerprint detection and analysis and will also prove to be an excellent reference for forensic practitioner libraries and for use in casework Coverage includes fingerprint science friction ridge print examination AFIS foot and palm prints and the professional issues practitioners may encounter Edited by a world renowned leading forensic expert this book is a long overdue solution for the forensic science community Provides basic principles of forensic science and an overview of interpretation and comparative methods Contains information on the chemistry of print residue and the visualization of latent prints Covers fingerprint science friction ridge print examination AFIS and foot and palm prints Includes a section on professional issues from crime scene to court lab reports health and safety and certification Incorporates effective pedagogy key terms review questions discussion questions and additional reading suggestions   *Handbook of Fingerprint Recognition* Davide Maltoni,Dario Maio,Anil K. Jain,Salil Prabhakar,2009-04-21 A major new professional reference work on fingerprint security systems and technology from leading international researchers in the field Handbook provides authoritative and comprehensive coverage of all major topics concepts and methods for fingerprint security systems This unique reference work is an absolutely essential resource for all biometric security professionals researchers and systems administrators   **Fingerprints and Other Ridge Skin Impressions** Christophe Champod,Chris J. Lennard,Pierre Margot,Milutin Stoilovic,2017-12-19 Since its publication the first edition of Fingerprints and Other Ridge Skin Impressions has become a classic in the field This second edition is completely updated focusing on the latest technology and techniques including current detection procedures applicable processing and analysis methods all while incorporating the expansive growth of literature on the topic since the publication of the original edition Forensic science has been challenged in recent years as a result of errors courts and other scientists contesting verdicts and changes of a fundamental nature related to previous claims of infallibility and absolute individualization As such

these factors represent a fundamental change in the way training identifying and reporting should be conducted This book addresses these questions with a clear viewpoint as to where the profession and ridge skin identification in particular must go and what efforts and research will help develop the field over the next several years The second edition introduces several new topics including Discussion of ACE V and research results from ACE V studies Computerized marking systems to help examiners produce reports New probabilistic models and decision theories about ridge skin evidence interpretation introducing Bayesnet tools Fundamental understanding of ridge mark detection techniques with the introduction of new aspects such as nanotechnology immunology and hyperspectral imaging Overview of reagent preparation and application Chapters cover all aspects of the subject including the formation of friction ridges on the skin the deposition of latent marks ridge skin mark identification the detection and enhancement of such marks as well the recording of fingerprint evidence The book serves as an essential reference for practitioners working in the field of fingermark detection and identification as well as legal and police professionals and anyone studying forensic science with a view to understanding current thoughts and challenges in dactyloscopy   **Product/Process Fingerprint in Micro Manufacturing** Guido Tosello,2019-05-31 The continuous miniaturization of products and the growing complexity of their embedded multifunctionalities necessitates continuous research and development efforts regarding micro components and related micro manufacturing technologies Highly miniaturized systems manufactured using a wide variety of materials have found application in key technological fields such as healthcare devices micro implants mobility communications optics and micro electromechanical systems Innovations required for the high precision manufacturing of micro components can specifically be achieved through optimizations using post process i e offline and in process i e online metrology of both process input and output parameters as well as geometrical features of the produced micro parts However it is of critical importance to reduce the metrology and optimization efforts since process and product quality control can represent a significant portion of the total production time in micro manufacturing To solve this fundamental challenge research efforts have been undertaken in order to define investigate implement and validate the so called product process manufacturing fingerprint concept The product manufacturing fingerprint concept refers to those unique dimensional outcomes e g surface topography form error critical dimensions etc on the produced component that if kept under control and within specifications ensure that the entire micro component complies to its specifications The process manufacturing fingerprint is a specific process parameter or feature to be monitored and controlled in order to maintain the manufacture of products within the specified tolerances By integrating both product and process manufacturing fingerprint concepts the metrology and optimization efforts are highly reduced Therefore the quality of the micro products increases with an obvious improvement in production yield Accordingly this Special Issue seeks to showcase research papers short communications and review articles that focus on novel methodological developments and applications in micro and sub micro scale manufacturing process monitoring and control

as well as micro and sub micro product quality assurance Focus will be on micro manufacturing process chains and their micro product process fingerprint towards full process optimization and zero defect micro manufacturing   <u>FBI Law Enforcement Bulletin</u> ,1944   *Computational Intelligence for Information Retrieval* Dharmender Saini,Gopal Chaudhary,Vedika Gupta,2021-12-14 This book provides a thorough understanding of the integration of computational intelligence with information retrieval including content based image retrieval using intelligent techniques hybrid computational intelligence for pattern recognition intelligent innovative systems and protecting and analysing big data on cloud platforms The book aims to investigate how computational intelligence frameworks are going to improve information retrieval systems The emerging and promising state of the art of human computer interaction is the motivation behind this book The book covers a wide range of topics starting from the tools and languages of artificial intelligence to its philosophical implications and thus provides a plethora of theoretical as well as experimental research along with surveys and impact studies Further the book aims to showcase the basics of information retrieval and computational intelligence for beginners as well as their integration and challenge discussions for existing practitioners including using hybrid application of augmented reality computational intelligence techniques for recommendation systems in big data and a fuzzy based approach for characterization and identification of sentiments   *A SURVEY ON VARIOUS APPROACHES TO FINGERPRINT MATCHING FOR PERSONAL VERIFICATION AND IDENTIFICATION* Shoba Dyre, C.P. Sumathi, Automatic Fingerprint authentication for personal identification and verification has received considerable attention over the past decades among various biometric techniques because of the distinctiveness and persistence properties of fingerprints Now fingerprints are set to explode in popularity as they are being used to secure smart phones and to authorize payments in online stores The main objective of this paper is to review the extensive research work that has been done over the past decade and discuss the various approaches proposed for fingerprint matching   *The finger print* Mr. Rohit Manglik,2024-01-01 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels   *Computational Algorithms for Fingerprint Recognition* Bir Bhanu,Xuejun Tan,2012-12-06 Biometrics such as fingerprint face gait iris voice and signature recognizes one s identity using his her physiological or behavioral characteristics Among these biometric signs fingerprint has been researched the longest period of time and shows the most promising future in real world applications However because of the complex distortions among the different impressions of the same finger fingerprint recognition is still a challenging problem Computational Algorithms for Fingerprint Recognition presents an entire range of novel computational algorithms for fingerprint recognition These include feature extraction indexing matching classification and performance prediction validation methods which have been compared with state of art algorithms and found to be effective and efficient on real

world data All the algorithms have been evaluated on NIST 4 database from National Institute of Standards and Technology NIST Specific algorithms addressed include Learned template based minutiae extraction algorithm Triplets of minutiae based fingerprint indexing algorithm Genetic algorithm based fingerprint matching algorithm Genetic programming based feature learning algorithm for fingerprint classification Comparison of classification and indexing based approaches for identification Fundamental fingerprint matching performance prediction analysis and its validation Computational Algorithms for Fingerprint Recognition is designed for a professional audience composed of researchers and practitioners in industry This book is also suitable as a secondary text for graduate level students in computer science and engineering *Hearings, Reports and Prints of the House Committee on Appropriations* United States. Congress. House. Committee on Appropriations,1970 Fingerprint Analysis Laboratory Workbook, Second Edition Hillary Moses Daluz,2018-10-26 Fingerprint collection and analysis may be performed as part of many jobs including crime scene technician latent print examiner criminalist and lab supervisor Regardless of one s specific background or role in the process a knowledge of scientific practices is critical in handling and analyzing fingerprint evidence The best way to understand the principles and concepts of any science learned in a classroom is to perform experiments The exercises in Fingerprint Analysis Laboratory Workbook Second Edition address all aspects of fingerprint theory investigation processing comparisons and research Designed specifically to parallel the Fundamentals of Fingerprint Analysis Second Edition textbook the laboratory exercises correspond with the textbook chapters with exercise in the lab chapter putting into practice the concepts covered in the text chapter Each lab follows the same format beginning with the objectives of the experiment and providing the background information necessary to perform the experiment This is followed by a list of required materials the lab exercises and post lab questions for students to test what they ve learned Many of the laboratory exercises may be completed either at home or in a laboratory setting Exercises and photographs enhance the text making it an ideal hands on learning tool New techniques and current practices added to the primary textbook have been included in this companion laboratory workbook to cover the latest in real world application of fingerprint analysis science to practice Fingerprint Development Techniques Stephen M. Bleay,Ruth S. Croxton,Marcel De Puit,2018-03-12 A comprehensive review of the latest fingerprint development and imaging techniques With contributions from leading experts in the field Fingerprint Development Techniques offers a comprehensive review of the key techniques used in the development and imaging of fingerprints It includes a review of the properties of fingerprints the surfaces that fingerprints are deposited on and the interactions that can occur between fingerprints surfaces and environments Comprehensive in scope the text explores the history of each process the theory behind the way fingerprints are either developed or imaged and information about the role of each of the chemical constituents in recommended formulations The authors explain the methodology employed for carrying out comparisons of effectiveness of various development techniques that clearly demonstrate how to select the most effective approaches The

text also explores how techniques can be used in sequence and with techniques for recovering other forms of forensic evidence In addition the book offers a guide for the selection of fingerprint development techniques and includes information on the influence of surface contamination and exposure conditions This important resource Provides clear methodologies for conducting comparisons of fingerprint development technique effectiveness Contains in depth assessment of fingerprint constituents and how they are utilized by development and imaging processes Includes background information on fingerprint chemistry Offers a comprehensive history the theory and the applications for a broader range of processes including the roles of each constituent in reagent formulations Fingerprint Development Techniques offers a comprehensive guide to fingerprint development and imaging building on much of the previously unpublished research of the Home Office Centre for Applied Science and Technology *Soft Computing for Recognition Based on Biometrics* Patricia Melin,Witold Pedrycz,2010-09-20 This book describes bio inspired models and applications of hybrid intelligent systems using soft computing techniques for image analysis and pattern recognition based on biometrics and other sources Each section groups papers on a similar subject **CSO** ,2002-09 The business to business trade publication for information and physical Security professionals Advances in Fingerprint Technology Ashim K.
