DEDUCTIVE GEOMETRY
 RAYMOND GUYAMIER, 2013-06-26 Deductive Geometry is for students parents and teachers who need practice solving proofs in geometry Specifically where geometry is part of the 4e curriculum in a French program or for American students taking geometry between grades 8 and 10 This book shows step by step how to reason and solve geometry problems by writing solutions in a clear logical and deductive sequence This strategy is called modeling Students learn by imitating the method and eliminating all the non value adding verbiage that are distracting to the grader By showing the core steps required to solve a problem students avoid extraneous text and steps that make the solution difficult to follow and difficult for the grader to evaluate with precision The book should be used as a complement to any geometry textbook It is especially beneficial for average students with difficulties writing the solution to a problem in a logical deductive process I would recommend the user of my book to first try to solve the problems entirely before comparing with the step by step solutions following each chapter
