taken to meet legal requirements but is also about social equality and environmental accountability also bearing in mind the links with eco efficiency innovation and the health and wellbeing of workers According to ISO 26000 social responsibility is the responsibility of an organisation for the impacts of its decisions and activities on society and the environment through transparent and ethical behaviour that a contributes to sustainable development including health and the welfare of society b takes into account the expectations of stakeholders c is in compliance with applicable law and consistent with international norms of behaviour d is integrated throughout the organisation and practised in its relationships But even though the relations between social responsibility and sustainability are strong it is still necessary to encourage organisations to adhere to or at least follow the principles of sustainable development in their operations giving something back to the community As such there is a need for a better understanding of how social responsibility is related to sustainable development and of the identification of processes methods and tools that may help the integration of these two important elements There is also a real need to showcase successful examples of how to structure behaviour and institutional practice in line with the sustainability challenges we face today Chapter Reviewing the Stakeholder Value Creation Literature Towards a Sustainability Approach is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)
