- Vertical view of a place (like the area south of King William's Town illustrated on the following page).
- Three types of symbols are evident – point, line and area symbols.
- Areas can be regular – such as rectangles (for instance, cultivated fields), triangles or circles. Or they can be irregular (for instance, dams have varying shapes).

Del Casino Jr., Natalie Marie Gulsrud, Sarah Barns, 2023-10-18 Artificial intelligence AI is now mediating and in some cases seen to be controlling key urban services and infrastructures thus becoming a prominent feature of the contemporary city As portrayed in recent studies the autonomous city can be understood as a city where urban

artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans At stake in these debates are questions related to the meaning and ongoing role of intelligence for both humans and machines While autonomous cars transport people service robots run shops drones deliver goods and city brains govern entire cities humans are redefining the meaning of what smart means in the city and what role the human being may play in future urban spaces With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore **Complete Year, Grade 3**
