Research Methods in Plant Sciences: Allelopathy Vol. 3 (Plant Pathogens) S.S. Narwal, 2004-07-01 Allelopathy is a new field of science as the term Allelopathy was coined by Prof Hans Molisch, a German Plant Physiologist in 1937. Till now, a lot of Allelopathy research work has been done in various fields of Agricultural and Plant Sciences. However, there is no compilation of various Research Methods used. Every scientist is conducting research in his own way. It is causing a lot of problems to researchers working in underdeveloped Third World Countries in small towns without Library facilities. Therefore, to make available the standard methods for conducting allelopathy research independently, this multi-volume book has been planned. Since allelopathy is a multi-disciplinary area of research, hence volumes have been planned for each discipline. Prof S. S. Narwal has planned this multi-volume Book *Research Methods in Plant Sciences: Allelopathy*. Three volumes: Volume 1 Soil Analysis, Volume 2 Plant Protection, and Volume 3 Plant Pathogens of this Book have been released during the IV International Allelopathy Conference 2004 at Hisar, India. Five volumes: Volume 4 Plant Analysis, Volume 5 Physiological Processes, Volume 6 Biochemical Processes, Volume 7 Forestry Agroforestry Research, and Volume 8 Isolation, Identification, and Characterization of allelochemicals are under preparation. This volume has 11 Chapters divided in three Sections viz Entomology, Nematology, and Weeds. It provides complete information about the various techniques used for Allelopathy Research in the field of Entomology, Nematology, and Weeds. It is written in a simple and lucid language. It will be very useful to undergraduate and Post graduate students and Faculty for use in Class room and Laboratory experiments and research. We are thankful to Prof G. S. Dhaliwal, Department of Entomology, Punjab Agricultural University, Ludhiana, and Prof V. Mojumder, Division of Nematology, Indian Agricultural Research Institute, New Delhi, for Peer Review of Entomology and Nematology Manuscripts.

Microorganisms in Plant Conservation and Biodiversity K. Sivasithamparan, K.W. Dixon, R.L. Barrett, 2007-05-08 Plant conservation is increasingly recognised as an outstanding global priority yet despite considerable efforts over the last few decades the number of threatened species continues to rise. The practice of plant conservation has for too long been a rather hit or miss mixture of methods. While microorganisms have been recognised as a crucial and essential element in supporting the lifecycles of plant species, there has been limited recognition of the relationships between macro level conservation, facilitating ecosystem functioning at the micro level. This book addresses the role of microorganisms in conservation, both their support functions and deleterious roles in ecosystem processes and species survival. Importantly, a number of authors highlight how microbial diversity is itself now under threat from the many and pervasive influences of man. What is clear from this volume is that like many contemporary treatments of plant and animal conservation, the solution to mitigate the erosion of biodiversity is not simple. This book represents an attempt to bring to the fore the ecological underwriting provided by microorganisms.
