Host Plant Resistance To Maruca Vitrata Fabricius In Cowpea:

Host Plant Resistance to Maruca Vitrata (Fabricius) in Cowpea C. S. Barad, Prakash Patel, Bindu Panickar, 2014-10-28 Cowpea *Vigna unguiculata* L Walpers is known for its versatility and adaptability to warm and dry conditions because of proven drought tolerance and thereby could be a more appropriate crop in current environmental changing scenario of global warming The larvae of spotted pod borer are known to cause damage by webbing the leaves bud flower and pods together and feed inside on them This typical feeding habit protects the larvae from natural enemies and other adverse factors including insecticides Host plant resistance to insect pests is an economically and ecologically preferred alternative as compared to other pest management strategies particularly the synthetic pesticides Plant characteristics which make the cultivars less suitable or unsuitable for feeding oviposition and development of an insect can be classified into two categories i e morphological biophysical and biochemical basis of resistance Plant morphological characters such as flower colour pod angle pod size etc and biochemicals like amino acids total soluble sugar protein phenol fiber tannin etc play important role in host plant resistance to *Maruca vitrata* *The Beans and the Peas* Aditya Pratap, Sanjeev Gupta, 2020-11-22 *The Beans and the Peas* From Orphan to Mainstream Crops presents a comprehensive literature resource on the most important food legume crops previously known as orphans but which are increasingly becoming mainstream as their production opportunities have been improved through genetic improvement and biotechnology and their role as an important nutrient source gains urgency This book focuses on 12 important food legumes and discusses all relevant aspects on their economic importance crop statistics botany and their general description It also provides exhaustive information on plant genetic resources and their use genetic improvement resistance to biotic and abiotic stresses improved varieties agronomy seed system and use of information and communication tools in each individual food legume Development of innovative biotechnological tools genetic transformation and the genome sequencing information has also been covered in each chapter providing the readers with state of the art information on pulses All chapters have been supported by relevant figures illustrations and tables which make the contents accessible and easy to understand Each of the chapters has been authored by globally known scientists researchers presenting up to date information on various aspects of food legumes This book provides a current and comprehensive treatise to the readers and will be tremendously helpful in furthering their academic and research pursuits Provides a single volume resource on the most important food legumes having a prominent role in food and nutritional security Written by experts with a focus on providing foundational information for further research and development Presents both theoretical aspects and application based case studies Supported by relevant figures illustrations and tables **Genomics-aided Breeding Strategies for Biotic Stress in Grain Legumes** Ashok Kumar Parihar, Abhishek Bohra, Amrit Lamichaney, R.K. Mishra, Rajeev K. Varshney, 2024-08-13 This contributed volume explores the latest breakthroughs in genetic and genomic resources for enhancing biotic stress responses in grain legumes including

minor ones It covers the advances made to date including gene identification transcriptomics proteomics transgenics genome editing genomic selection epigenetic breeding and speed breeding related to different biotic stresses Authored by crop specific experts the chapters in this book are essential resources for those directly involved in improving grain legume crops Legumes play a vital role in ensuring food and nutritional security enhancing soil quality and promoting environmental sustainability Rich in protein they are essential in preventing hunger and malnutrition while adding to dietary diversity However as these crops are commonly grown in marginal lands with poor inputs they are highly susceptible to biotic stresses such as diseases and pests which can cause significant yield losses This book consolidates all available knowledge about genetic and genomic aspects of biotic stress responses in various grain legumes It is a must have resource for all stakeholders involved in grain legume improvement Whether you are a breeder pathologist biotechnologist seed production specialist market manager graduate or post graduate student or any other industry professional this book serves as an excellent guide to help you stay at the forefront of grain legume improvement

Introgression Breeding in Cultivated Plants Jaime Prohens, Pietro Gramazio, Mariola Plazas, Laura Toppino, 2021-11-24 **Achieving sustainable cultivation of grain legumes Volume 1** Dr Shoba Sivasankar, Dr David Bergvinson, Dr Pooran Gaur, Dr Shiv Kumar Agrawal, Dr Steve Beebe, Dr Manuele Tamò, 2018-03-12 Reviews key developments in understanding crop physiology and genetic diversity and how they have informed advances in breeding new varieties Coverage of advances across the value chain for grain legume cultivation from variety selection to post harvest storage Discusses the latest trends in disease insect pest and weed management

Sustainable Management of Invasive Pests in Africa Saliou Niassy, Sunday Ekesi, Lorna Migiro, Washington Otieno, 2020-07-13 Invasive species generally affect economically important crops thus affecting the livelihoods of millions of people along crop value chains Typically invasive species have high migratory capabilities and because of plant material exchanges made during trade they cannot be contained by one country Usually African countries react after a pest has invaded and established itself in the country making the cost of mitigating the pest even more expensive This book presents a pan African view of the impacts of invasive insect pests on agriculture and of how invasive species impact on productivity in Africa It not only describes their importance but also presents a diversity of research findings in the field ranging from the use of early warning and monitoring systems for quarantine purposes agricultural extension all the way to control strategies The IPM arsenal presented in this book includes the use of botanical bioactive compounds semiochemicals resistant varieties biological control agents such as entomopathogens endophytes predators and natural enemies Aspects of technology transfer strategies regional coordination and farmers perceptions have not been

overlooked because these affect the adoption of mitigation strategies The book also presents measures that would help agricultural research services to estimate the damage and take actions for preparedness and readiness to face invasive insect pests This starts with a basic knowledge of taxonomy to enable concerned persons to describe the insects and the vast inventory of affected crops Physiological and ecological aspects of invasive pests are strongly highlighted to strengthen Integrated Pest Management Strategies The threat of invasive species will remain permanent therefore the book encourages knowledge exchange and collaboration between researchers and scientists on the continent while encouraging the establishment of a platform or a fund for preparedness and rapid response

Integrated Pest Management in Tropical Regions Carmelo Rapisarda, Giuseppe E Massimino Cocuzza, 2017-12-11 This book provides up to date and comprehensive coverage of the research and application of Integrated Pest Management IPM in tropical regions The first section explores the agro ecological framework that represents the foundations of IPM in addition to emerging technologies in chemical and biological methods that are core to pest control in tropical crops The second section follows a crop based approach and provides details of current IPM applications in the main tropical food crops such as cereals legumes root and tuber crops sugarcane vegetables banana and plantain citrus oil palm tea cocoa and coffee and also fibre crops such as cotton and tropical forests
