Compact Multifunctional Antennas for Wireless Systems Eng Hock Lim,Kwok Wa Leung,2012-05-22 Offers an up to date description of modern multifunctional antenna systems and microwave components Compact multifunctional antennas are of great interest in the field of antennas and wireless communication systems but there are few if any books available that fully explore the multifunctional concept Divided into six chapters Compact Multifunctional Antennas for Wireless Systems encompasses both the active and passive multifunctional antennas and components for microwave systems It provides a systematic valuable reference for antenna microwave researchers and designers Beginning with such novel passive components as antenna filters antenna packaging covers and balun filters the book discusses various miniaturization techniques for the multifunctional antenna systems In addition to amplifying and oscillating antennas the book also covers design considerations for frequency and pattern reconfigurable antennas The last chapter is dedicated to the field of solar cell integrated antennas Inside readers will find comprehensive chapters on Compact Multifunctional Antennas in Microwave Wireless Systems Multifunctional Passive Integrated Antennas and Components Reconfigurable Antennas Receiving Amplifying Antennas Oscillating Antennas Solar cell integrated Antennas Aimed at professional engineers and researchers designing compact antennas for wireless applications Compact Multifunctional Antennas for Wireless Systems will prove to be an invaluable tool Crash Causal Factors and Countermeasures for High-risk Locations on Multilane Primary Highways

in Virginia Nicholas J. Garber,Chase R. Buchanan,2009 In 2004 a total of 95 020 vehicle crashes occurred on highways under the jurisdiction of the Virginia Department of Transportation VDOT Of these 39 847 crashes occurred on primary highways and 345 of these were fatal crashes VDOT s traffic engineers continue to place increasing emphasis on identifying causal factors for crashes to enhance the selection of appropriate and effective countermeasures The purpose of this study was to identify causal factors and appropriate countermeasures for crashes occurring at high risk locations on multilane primary highways from 2001 through 2006 These high risk locations were identified by Fontaine and Reed 2006 in a VDOT safety

corridor study A total of 365 sites 1 to 2 mi in length were used in the study The statewide sites were located on rural and urban highways with divided undivided and traversable medians with about 40 sites per VDOT district Crash data were extracted from police crash reports and geometric data were collected through site visits Operational data were collected using VDOT s resources The analysis involved more than 34 000 crashes and was conducted using fault tree analysis and generalized linear modeling The fault tree analysis was used to determine the critical fault path based on the probability of an event occurring Individual fault trees were constructed for each collision type and for each highway classification The generalized linear models were developed for different highway classifications urban divided urban undivided urban traversable central lanes that can be used for left turns in both directions and rural divided highways Models were developed for rear end crashes and total crashes and separate models were developed for injury crashes property damage only PDO crashes and injury PDO crashes Appropriate potential countermeasures were then identified based on the significant causal factors identified in the models The results indicated that rear end crashes were the predominant type of crash representing 56% of all PDO crashes on urban divided highways and 37% of all PDO crashes on rural divided highways Implementing the recommended countermeasures for total rear end and angle crashes for different assumed levels of rehabilitation is expected to result in a crash reduction of up to about 40% depending on the site and level of rehabilitation undertaken A benefit cost analysis showed that the benefit cost ratios were higher than 1 for all levels of countermeasure implementation

Virtual Crowds Nuria Palechano, Norman Badler, Jan Allbeck, 2022-05-31 There are many applications of computer animation and simulation where it is necessary to model virtual crowds of autonomous agents Some of these applications include site planning education entertainment training and human factors analysis for building evacuation Other applications include simulations of scenarios where masses of people gather flow and disperse such as transportation centers sporting events and concerts Most crowd simulations include only basic locomotive behaviors possibly coupled with a few stochastic actions Our goal in this survey is to establish a baseline of techniques and requirements for simulating large scale virtual human populations Sometimes these populations might be mutually engaged in a common activity such as evacuation from a building or area other times they may be going about their individual and personal agenda of work play leisure travel or spectator Computational methods to model one set of requirements may not mesh well with good approaches to another By including both crowd and individual goals and constraints into a comprehensive computational model we expect to simulate the visual texture and contextual behaviors of groups of seemingly sentient beings

**Geospatial Technologies and Homeland Security** Daniel Sui, 2008-05-25 Homeland security and context In the *Geographical Dimensions of Terrorism* GDOT Cutter et al 2003 the first book after 9/11 to address homeland security and geography we developed several thematic research agendas and explored intersections between geographic research and the importance of context both geographical and political in relationship to the concepts of terrorism and security It is good to see that a great deal of new thought and research continues to flow from that initial research agenda as illustrated by many of the papers of this new book entitled *Geospatial Technologies and Homeland Security Research Frontiers and Future Challenges* Context is relevant not only to understanding homeland security issues broadly but also to the conduct of research on geospatial technologies It is impossible to understand the implications of a homeland security strategy let alone hope to make predictions conduct meaningful modeling and research or assess the value and dangers of geospatial technologies without consideration of overarching political social economic and geographic contexts within which these questions are posed
