Practical Manual on Plant Cytogenetics Ram J. Singh, 2017-11-27 Earlier books on the handling of plant chromosomes have not included many of the innovations in cytological techniques for many important crops that have become available in recent years including information on associating genes with chromosomes The aim of this book is to compile all the plant cytogenetic techniques previously published in earlier books into a laboratory manual The first part of the book describes standard cytological techniques that are routinely used by students The second part covers methods used for specific crops for which common cytological methods do not work satisfactorily The third part discusses cytogenetic techniques cytology and genetics for physically locating genes on specific chromosomes This novel book will be highly useful to students teachers and researchers as it is a convenient and comprehensive reference for all plant cytogenetic techniques and protocols

Edward Gasque, Clayton Edward Gasque, 1989 **DNA Repair Protocols** Pat Vaughan, 2008-02-02 When setting out to decide on the content of DNA Repair Protocols Prokaryotic Systems I was conscious of the need to portray the vast array of pathways and enzymatic activities that are part of the discipline of DNA repair In addition to the classical DNA repair activities I wanted to convey the significant interest that has been generated in recent years in the use of the proteins and repair systems as research tools much like the use of restriction

enzymes over the last few decades. Therefore, in addition to chapters detailing protocols for investigating specific repair activities, I have included several chapters in this book on the applied use of DNA repair proteins and systems. The many years of research on bacterial DNA repair systems have allowed us to really understand the majority of DNA repair pathways in bacterial cells. Building on this knowledge, research has led to major advances in understanding mammalian DNA repair and uncovered its links to human disease such as DNA mismatch repair and colon cancer, nucleotide excision repair and xeroderma pigmentosum, DNA helicase function in Bloom's syndrome and so on. Such have been the advances that *Science* magazine identified the collective DNA repair systems as its Molecule of the Year in 1994.

A Dissection and Tissue Culture Manual of the Nervous System Abraham Shahar, 1989-12-05

At last, a collection of practical protocols for explanting and manipulating neuronal and glial cells. *A Dissection and Tissue Culture Manual of the Nervous System*, Abraham Shahar, Jean de Vellis, Antonia Vernadakis and Bernard Haber, Editors. Among research laboratories involved with neuronal and glial cell cultures and their applications, there is a growing demand for a handbook describing dissection procedures, culture preparation techniques and the in vitro manipulation of neural cells and tissues for specific analytical purposes. *A Dissection and Tissue Culture Manual of the Nervous System* offers a diverse collection of methods that have been developed by and are used routinely within specialized neurobiological laboratories. Written in an easy-to-follow style, the procedures described in this unique guide are designed by experts to be applied by those with limited experience in the field. Organized into ten comprehensive sections, ninety concise contributions from leading laboratories worldwide put forth practical, stepwise protocols for neural cell manipulation and experimentation. Methods encompass an illustrated outline of techniques for the dissection of brain areas in the fetus and the neonate, the dissection of selected specialized structures such as the ciliary ganglion, organotypic explant culture of nervous tissue, dissociated culture of astrocytes, oligodendrocytes, neurons and Schwann cells, reaggregation culture of dissociated cells. Sections devoted to various tissue processing methods and experimental applications of cultured material present histochemical, autoradiographic and immunocytochemical staining and visualization techniques. In situ hybridization methods as well as preparative procedures for electron microscopy and biochemical and physiological assays are discussed with an emphasis on methods tailored for the neurobiologist. Alternative techniques for the cultivation of the same organ or cell type from diverse animal species are juxtaposed with a varied selection of methodology and instrumentation and complemented by key literature citations for further reading to enable the investigator to choose the appropriate approach for a specific neurobiological application. Presented in a combined format for convenient use on the laboratory bench, *A Dissection and Tissue Culture Manual of the Nervous System* will be an essential research companion to graduate students, postdoctoral fellows and other laboratory investigators in cell and developmental neurobiology, neuroanatomy, neurophysiology, neuropharmacology and biochemistry.
