A NOVEL APPROACH OF AUTHENTICATION USING PIXEL VALUE GRAPHICAL PASSWORD SCHEME MOHD

SHUKRAN MOHD AFIZI,2015-03-31 In decades authentication system is relying on username and password as passphrase object for authentication process The username and password mechanism bring major problem lately and raising the system developer worries on security for client server communication Many methods and mechanisms are being introduced to overcome this authentication flaws One of mechanism that has been introduce is graphical password mechanism on purpose to reduce human memory burden based on psychological study that shows human is better at recognizing and remembering images However the current method result many security flaw on graphical password authentication mechanism and require specific tool which is cannot be easily implement on any computer system platform To overcome current method flaws pixel value graphical password scheme is being introduced by combining the text based password mechanism and graphical password mechanism where the authentication system extracting pixel value that resides in a digital image file The extracted eight bits pixel value is used as the passphrase alongside with username during authentication process The design and development of this method is based on identified graphical password enhancement and user requirement through literature review analysis Results on literature analysis are being referred to develop the system flow and system design as the design concept which is being used for prototyping development The developed prototype is being tested with several collections of image specimens as image experimental testing Results and output from the testing show promising results as the result for Pixel Value graphical password scheme is bring an extremely positive impact In other words pixel value graphical password scheme is bringing graphical password scheme a secure promising authentication implementation

password systems LRP and introduces two practical LRP systems named Cover Pad and ShadowKey It demonstrates that existing LRP systems are subject to both brute force attacks and statistical attacks and that these attacks cannot be effectively mitigated without sacrificing the usability of LRP systems Quantitative analysis proves that a secure LRP system in practical settings imposes a considerable amount of cognitive workload unless certain secure channels are involved The book introduces a secure and practical LRP system named Cover Pad for password entry on touch screen mobile devices Cover Pad leverages a temporary secure channel between a user and a touch screen which can be easily realized by placing a hand shielding gesture on the touch screen The temporary secure channel is used to deliver a hidden message to the user for transforming each password symbol before entering it on the touch screen A user study shows the impact of these testing conditions on the users performance in practice Finally this book introduces a new LRP system named ShadowKey Shadow Key is designed to achieve better usability for leakage resilient password entry It leverages either a permanent secure channel which naturally exists between a user and the display unit of certain mobile devices or a temporary secure channel which can be easily realized between a user and a touch screen with a hand shielding gesture The secure channel protects the mappings between original password symbols and associated random symbols Unlike previous LRP system users Shadow Key users do not need to remember anything except their passwords Leakage Resilient Password Systems is designed for professionals working in the security industry Advanced level students studying computer science and electrical engineering will find this brief full of useful material
