Statistics in Genetics and in the Environmental Sciences Luisa T. Fernholz, Stephan Morgenthaler, Werner Stahel, 2012-12-06 Statistics is strongly tied to applications in different scientific disciplines and the most challenging statistical problems arise from problems in the sciences In fact the most innovative statistical research flows from the needs of applications in diverse settings This volume is a testimony to the crucial role that statistics plays in scientific disciplines such as genetics and environmental sciences among others The articles in this volume range from human and agricultural genetic DNA research to carcinogens and chemical concentrations in the environment and to space debris and atmospheric chemistry Also included are some articles on statistical methods which are sufficiently general and flexible to be applied to many practical situations The papers were refereed by a panel of experts and the editors of the volume The contributions are based on the talks presented at the Workshop on Statistics and the Sciences held at the Centro Stefano Franscini in Ascona Switzerland during the week of May 23 to 28 1999 The meeting was jointly organized by the Swiss Federal Institutes of Technology in Lausanne and Zurich with the financial support of the Minerva Research Foundation As the presentations at the workshop helped the participants recognize the potential role that statistics can play in the sciences we hope that this volume will help the reader to focus on the central role of statistics in the specific areas presented here and to extrapolate the results to further applications

TEXT BOOK OF MEDICINAL CHEMISTRY-I Mr. Laxman Prajapati, Shama Parveen,

Dr. Vijay Kumar Bansal, Dr. Rita Dadarao Chakole, Prof. (Dr.) Bhoomika, 2025-09-16 The Textbook of Medicinal Chemistry I is a comprehensive guide designed for pharmacy and medicinal chemistry students. It introduces learners to the evolution of medicinal chemistry, highlighting the history, growth, and significance of the discipline in modern drug discovery. The book begins with a thorough explanation of physicochemical properties like ionization, solubility, partition coefficient, hydrogen bonding, protein binding, chelation, bioisosterism, and stereochemistry, all of which dictate the biological action of drugs. It then progresses to drug metabolism, covering the principles of Phase I and Phase II reactions, as well as the factors including stereochemical aspects that influence metabolic pathways. A major portion of the text is dedicated to drugs acting on the autonomic nervous system. Students are introduced to adrenergic neurotransmitters with detailed discussions on the biosynthesis and catabolism of catecholamines, alongside receptor classification and distribution. Sympathomimetic agents are presented systematically, including their classification, mechanisms of action, uses, and structure-activity relationships (SAR). Both direct and indirect acting sympathomimetic agents are highlighted, along with those having mixed mechanisms. Adrenergic antagonists are given equal emphasis, covering both α and β blockers with their SAR and clinical significance. The cholinergic system is another core area, with explanations of acetylcholine biosynthesis, catabolism, and receptor subtypes. Parasympathomimetic agents are classified and elaborated upon, including direct acting agents such as carbachol and pilocarpine, and indirect acting cholinesterase inhibitors, both reversible and irreversible. The text also details cholinesterase reactivators like pralidoxime. Cholinergic blocking agents are discussed in depth, ranging from natural solanaceous alkaloids such as atropine and scopolamine to synthetic derivatives like dicyclomine and ipratropium, with their SAR, mechanisms, and therapeutic uses clearly explained. Moving into central nervous system drugs, the book explores sedatives and hypnotics, particularly benzodiazepines and barbiturates. Their SAR, mechanisms, and clinical applications are thoroughly described, along with miscellaneous sedative agents such as meprobamate and paraldehyde. Antipsychotics are then presented, classified into phenothiazines, ring analogues, butyrophenones, and other groups, with special focus on their SAR and therapeutic uses. Anticonvulsants receive dedicated coverage as well, including barbiturates, hydantoins, succinimides, benzodiazepines, and newer agents like carbamazepine, valproic acid, and gabapentin, alongside their mechanisms of action.
