web description the lms filter block can implement an adaptive fir filter by using five different algorithms the block estimates the filter weights or coefficients needed to minimize the error  $e_n$  between the output signal  $y_n$  and the desired signal  $d_n$  the output is the filtered input signal which is the estimate of the desired signal

web introduction due to their many good performance characteristics adaptive lters have been satisfactorily used for canceling unknown interferences contained in the relevant signal of a wide range of dynamic systems for many years
