**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 10-week training program that included aerobic, strength, and flexibility exercises. Physical fitness was measured using a series of tests, including a 1000-m run, a 100-m sprint, a 50-m sprint, a 20-m sprint, a 10-m sprint, a 5-m sprint, a 2-m sprint, a 1-m sprint, a 0.5-m sprint, and a 0.2-m sprint. The results showed that the experimental group had significantly higher physical fitness levels than the control group at the end of the 10-week training program. The findings suggest that a 10-week training program can improve the physical fitness of 10-year-old children.
