It's a common misconception that the only way to get a good idea of what a company is doing is to look at its earnings. But that's not always true. Sometimes a company's earnings can be manipulated, or they can be misleading. For example, a company might have a high profit margin, but that doesn't mean it's a good company. It could be a company that's just starting out, or it could be a company that's in a declining industry. So, when you're looking at a company's earnings, it's important to look at other factors as well, like its market position, its growth prospects, and its management team.
