Reed,1975 Recent oceanic data and observations from five coastal sites in the National Weather Service solar radiation network are compared with a formula for computing clear sky insolation derived from the Smithsonian Meteorological Tables using a transmission coefficient of 0.7 The results are generally in good agreement and they suggest that this formula is suitable for computing insolation over the ocean for a wide range of latitudes The comparison also indicates that a correction to the formula for middle latitudes is not warranted The one other formula in good agreement with that from the Smithsonian Tables is one derived by Lumb Laevastu s formula is only acceptable at sun angles less than 50 and Berliands estimates are too high at all solar altitudes The formula from the Smithsonian Tables can be used to compute insolation over the oceans with a random error of estimate probably not exceeding 5% for periods of a few days or longer **New American Practical Navigator** ,1939 The Encyclopaedia Britannica: Con to Edw ,1910 **Senate documents** ,1897 *Report Upon the Primary Triangulation of the United States Lake Survey* Cyrus Ballou Comstock,2024-05-30 Reprint of the original first published in 1882 Theory of the Earth's Shape V.C.
