organisms as an end product of respiration This carbon dioxide in turn is used by producer organisms for the synthesis of food This is another example how natural processes are inter related and inter dependant This book Atmosphere discovers the fundamental processes that cause atmospheric circulation and create climate zones and weather patterns and learn how carbon cycling between atmosphere land and ocean reservoirs helps to regulate Earth s climate As a large amount of carbon dioxide is utilized by plants on average it comprises only 0.04 percent of dry air Nevertheless it plays significant role in keeping the atmosphere at temperatures that permit life The concentration of carbon dioxide nowadays is increasing due to human activities Today man burns large quantities of fossil fuels for various purposes As a result huge amounts of carbon dioxide are emitted into the atmosphere Its ever increasing concentration has already resulted in global warming and in some places melting of ice
