The book provides a broad view of some of the opportunities and challenges brought by integrating information across organisational and system boundaries in the built environment industry. Chapters cover a large range of topics and are separated into three sections: resources, processes and added value. They provide a much needed international perspective on a current global evolution in the industry and present leading original research and valuable lessons for researchers, industry practitioners, government clients and policy makers across the industry. Key features include a broad range of topics that are not covered elsewhere in the literature, contributions from a diverse group of industry research leaders from across the globe, exemplar case studies providing real world examples of where information integration has been a key factor for success or lack thereof has been at the root cause of failure, an analysis of future priority areas for research and development investment as well as their strategic implications for public and private decision makers, the book will deliver innovation in best practice methodology for information sharing across disciplines and between the design, construction and asset management sectors.

The Greening of Industrial Ecosystems National Academy of Engineering, Advisory Committee on Industrial Ecology and Environmentally Preferable Technology, 1994-01-01

In the 1970s the first wave of environmental regulation targeted specific sources of pollutants. In the 1990s concern is focused not on the ends of pipes or the tops of smokestacks but on sweeping regional and global issues. This landmark volume explores the new industrial ecology, an emerging framework for making environmental factors an integral part of economic and business decision making. Experts on this new frontier explore concepts and applications including:

- Bringing international law up to par with many national laws to encourage industrial ecology principles
- Integrating environmental costs into accounting systems
- Understanding design for environment, industrial metabolism and sustainable development and how these concepts will affect the behavior of industrial and service firms

The volume looks at negative and positive aspects of technology and addresses treatment of waste as a raw material. This volume will be important to domestic and international policymakers, leaders in business and industry, environmental specialists and engineers and designers.
