

MARTIN FIRECAT PRO-X

BowReport
by Scott Matney

Martin Firecat Pro-X

Distinguished by its new Cat Hybrid Duo Cam system and an innovative Roto Limb Pivoting Cap design, the 71-inch 2008 Martin Firecat Pro-X is the latest addition to Martin's Pro Series of bows. The Pro Series is composed of these Martin bows that are sold exclusively through Martin authorized dealers. In this case the Limb Cap-only "caps" the pivot points, having been substantially reduced in structure elsewhere.

However, it was the structure of the Firecat handle that first caught my eye. Continuing a design practice begun in 2002, Martin engineers created a three-piece, 6061 T-6 aluminum alloy handle for the bow that consists of an upper riser, a handle section, and a lower riser. This structural concept offers lateral grain flow for all three pieces (because they are machined from individual billets) without the usual offsets that occur at the shelf area and at the top of the sight window in a one-piece billet. In addition, less machining is required, and literally pounds of offal are saved. The real problem is making the joints strong and rigid while blending the edges of the individual pieces to create a smooth and, hopefully, undetectable parting line. In my judgment Martin has accomplished this by assembling the three pieces and then finish-machining the assembly as a single unit. I had to study the finished assembly and then have recourse to a strong light and a magnifying glass to locate the separations. Martin uses five stainless steel, socket-head bolts to attach the three parts: three bolts in the upper joint, and two at the shelf. In both locations they have carefully concealed the bolted connections with coverings so that a casual glance would not disclose their locations. The upper connection is concealed by an inserted molded part and the shelf bolts are covered by the Firecat Shelf, which is a molded dampening overlay that overlays the surface of the shelf up to and over the rest mount area. It is quite functional because it deadens noise from dislodged arrows and also from a full-arrow rest.

The upper and lower risers are each fitted with a Vibration Escape module molded of Omega V material with suspended stabilizing weights. These units are inserted in holes in the risers and serve to dampen noise and vibration. The grip section uses the Thermal V Grip design made of leather on the face and surrounded by Omega V material for warmth and dampening. Two holes, drilled and tapped N-24 UNF, are provided above the shelf for mounting an arrow rest or cushion plunger. The cable guard rod, a 3-inch-diameter section of carbon-reinforced material, is mounted in a hole on the face side of the upper riser. It carries a molded Teflon slider to minimize friction with the cables. The Firecat is equipped with an STS Shock Terminator Suppressor to dampen string noise and vibration. The versatile Martin Lock Mount System configuration is machined into the offside of the sight window. A filler piece is included to permit normal rest attachment.

The Roto Limb Cap Pivoting System is introduced on the Pro Series bows. In an effort to minimize total weight-in-hand, Martin has attacked the attachment of the limbs
