Quintessence of Dust: The Science of Matter and the Philosophy of Mind Harry Redner, 2020-03-23

Quintessence of Dust by Harry Redner argues for a science of matter and a philosophy of mind based on emergence Mind emerges from matter through five essential stages quintessence Hamlet Human mind is differentiated from animal mind

primarily by reference to art Homo ludens This approach draws support from Donald Edelman and other palaeoanthropologists psychologists and neurologists The emergent relation between two entities is defined as an indissoluble non identity The mind as machine thesis artificial intelligence and cognitivism are criticised The alternative emergentist approach comes close to Spinoza The book attempts a synthesis of the natural sciences social sciences and humanities based on philosophic premises I find the core of the argument as well as its exposition coherent convincing and illuminating I put Quintessence of Dust in the top 5% of books in the field Miguel Candel Sanmartin University of Barcelona in Thesis Eleven August 2022 Quirks of Human Anatomy Lewis I. Held, 2009-05-29 This book introduces students to basic concepts in evolutionary developmental biology for undergraduate and graduate courses **A Mind So Rare** Merlin Donald, 2002 Donald psychology Queen s University Canada challenges the prevailing view that seeks to explain away human consciousness and presents a theory on the origins of the modern mind He describes the cultural and neuronal forces that power human modes of awareness and proposes that the human mind is a hybrid product of the interweaving of the brain with an invisible symbolic web of culture to form a distributed cognitive network Using evidence from brain and behavioral studies of humans and animals he explains how an expansion of consciousness transcends the limitations of the mammalian mind and elaborates the foundations of self evaluation and self reflection c Book News Inc Tax Court Memorandum Decisions Commerce Clearing House, United States. Von Grunebaum,Roger Caillois,2023-07-28 The study of dreams and their role in human societies particularly within classical Islam provides a fascinating lens through which to understand both individual and collective psychology In medieval Islamic culture dreams were seen not only as personal experiences but as profound communications from the divine or supernatural This belief system imbued the dream with cognitive power often interpreting dreams as forms of prophecy or divine messages a view that transcended the individual's inner psyche and extended into the realm of objective truth Dreams were considered a bridge to understanding the future the Hereafter and the will of God with scholars like Abdalghani an N bulus developing elaborate systems for interpreting their meanings These interpretations drew heavily from religious texts such as the Koran and Hadith and offered guidance on a variety of matters ranging from personal conduct to political affairs The significance of dreams within classical Islam is also evident in their societal and political implications Dreams were not only seen as personal revelations but also as instruments of prophecy often used to predict the death of rulers the success of military campaigns or the outcomes of political struggles They were deeply intertwined with religious doctrines with the Prophet Muhammad and various saints appearing in dreams to guide or advise key figures in Islamic history These dream visions were viewed as essential tools for navigating both the personal and political spheres reinforcing the belief that the dream world was closely linked with the divine order The widespread acceptance of dreams as a form of truth is a striking contrast to contemporary Western thought where dreams are more commonly seen as reflections of the subconscious mind In this sense the historical and cultural context of classical Islam elevated the dream to a status that intertwined it with both personal and societal identity suggesting a powerful intersection of religion politics and individual experience This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1966 **Dragon Bone Hill** Noel Thomas Boaz,Russell L. the extraordinary facility of humans to absorb and apply knowledge The remarkable educability of the human brain can be understood as an information processing ability It sets our species apart enables the civilization we have and gives us the power and potential to set our planet on a steady course Yet it comes hand in hand with an insidious weakness While we can readily absorb entire systems of thought about worlds of experience beyond our own we struggle to judge correctly what information we should trust In this visionary book Leslie Valiant argues that understanding the nature of our own educability is crucial to safeguarding our future After breaking down how we process information to learn and apply knowledge and drawing comparisons with other animals and AI systems he explains why education should be humankind s central preoccupation Will the unique capability that has been so foundational to our achievements and civilization continue to drive our progress or will we fall victim to our vulnerabilities If we want to play to our species great strength and protect our collective future we must better understand and prioritize the vital importance of being educable This book provides a road map
