

Chapter 5 Find The Errors!

For use with Lessons 5-1 through 5-2

For each exercise, identify the error(s) in planning the solution or solving the problem. Then write the correct solution.

1. The table shows the price for different amounts of cashew nuts. What is the rate of change in price with respect to weight? What does that rate of change represent?

Weight (lbs.)	Price (\$)
1	3.5
2	7
3	10.5
4	14

$$\text{rate of change} = \frac{\text{change in price}}{\text{change in weight}}$$

$$\frac{2 - 1}{7 - 3.5} \approx 0.286 \quad \frac{3 - 2}{10.5 - 7} \approx 0.286 \quad \frac{4 - 3}{14 - 10.5} \approx 0.286$$

The rate of change is approximately \$0.286 per pound.

It represents the unit price of the cashews.

2. What is the slope of the line through $(9, -3)$ and $(7, -4)$?

$$\begin{aligned} \text{slope} &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{-4 - (-3)}{9 - 7} \\ &= -\frac{1}{2} \end{aligned}$$

The slope of the line is $-\frac{1}{2}$.

3. Does the equation $-x + y = 3$ represent a direct variation? If so, find the constant of variation.

$$\begin{aligned} -x + y &= 3 \\ y &= x + 3 \end{aligned}$$

The equation is a direct variation because y is always 3 more than x .

4. A rectangular photo is 3 inches high and 5 inches long. As the photo is enlarged, the height varies directly with the width. What is an equation that relates the length (in inches) x and the height (in inches) y ?

$$\begin{aligned} y &= kx \\ 5 &= 3k \\ \frac{5}{3} &= k \end{aligned}$$

The equation $y = \frac{5}{3}x$ gives the height y (in inches) of an enlargement that is x inches wide.

Error-Control Coding for Data Networks Irving S. Reed,Xuemin Chen,2012-12-06 The purpose of Error Control Coding for Data Networks is to provide an accessible and comprehensive overview of the fundamental techniques and practical applications of the error control coding needed by students and engineers An additional purpose of the book is to acquaint the reader with the analytical techniques used to design an error control coding system for many new applications in data networks Error control coding is a field in which elegant theory was motivated by practical problems so that it often leads to important useful advances Claude Shannon in 1948 proved the existence of error control codes that under suitable conditions and at rates less than channel capacity would transmit error free information for all practical applications The first practical binary codes were introduced by Richard Hamming and Marcel Golay from which the drama and excitement have infused researchers and engineers in digital communication and error control coding for more than fifty years Nowadays error control codes are being used in almost all modem digital electronic systems and data networks Not only is coding equipment being implemented to increase the energy and bandwidth efficiency of communication systems but coding also provides innovative solutions to many related data networking problems
