Full-scale Fire Tests on a Simulated Aircraft Carrier Flight Deck H. B. Peterson, 1972* Fire From the Sky Robert C. Stem, 2010-03-17 By late 1944 the war in

the Pacific had turned decisively against the Japanese and overwhelming Allied forces began to close in on the home islands. At this point Japan unveiled a terrifying new tactic: the suicide attack or Kamikaze, named after the Divine Wind which had once before in medieval times saved Japan from invasion. Intentionally crashing bomb-laden aircraft into Allied warships, these piloted guided missiles at first seemed unstoppable, calling into question the naval strategy on which the whole war effort was based. This book looks at the origins of the campaign, at its strategic goals, the organization of the Japanese special attack forces, and the culture that made suicide not just acceptable but honourable. Inevitably much mythology has grown up around the subject, and the book attempts to sort the wheat from the chaff. One story that does stand up is the reported massive stockpiling of kamikaze aircraft for use against any Allied invasion of the home islands if the atomic bombs had not forced Japan's surrender. However, its principal focus is on the experience of those in the Allied fleets on the receiving end of this peculiarly alien and unnerving weapon: how they learnt to endure and eventually counter a threat whose potential was overestimated by both sides. In this respect it has a very modern resonance.

Aircraft Carrier Flight and Hangar Deck Fire Protection: History and Current Status, 2005. This report covers the history and current status of fire protection on aircraft carrier flight decks and hangar decks. Fire protection on aircraft carriers is a joint responsibility of the Naval Sea Systems Command and the Naval Air Systems Command. The report begins with a quick orientation covering some of the significant physical characteristics of aircraft carriers that are relevant to fire protection. The fire-hazardous nature of carrier operations is discussed specifically with focus on some of the concerns relative to air-launched ordnance. Next, a review of firefighting systems, including the firefighting agents currently in use as well as the current tactics for fighting fires on the flight deck and the hangar deck, is provided. We review the history of carrier fires and emphasize some of the lessons learned, including the research and development programs that resulted from those fires. Some recent program initiatives under NAVAIR project W1819 are covered. Finally, the report covers a list of some current shortcomings and future concerns.

Navy Airman's Manual United States. Office of the Chief of Naval Operations, 1953. *Danger's Hour* Maxwell Taylor Kennedy, 2009-11-03. Drawing on years of research and firsthand interviews with both American and Japanese survivors, Maxwell Taylor Kennedy draws a gripping portrait of men bravely serving their countries in war and the advent of a terrifying new weapon: suicide bombing, that nearly halted the most powerful nation in the world. In the closing months of World War II, Americans found themselves facing a new weapon: kamikazes, the first men to use airplanes as suicide weapons. By the beginning of 1945, facing imminent invasion, Japan turned to its most idealistic young men and demanded of them the greatest sacrifice. On May 11, 1945, days after Germany's surrender, the USS Bunker Hill, with thousands of crewmen and the most sophisticated naval technology available, was 70 miles off the coast of Okinawa when pilot Kiyoshi Ogawa flew his plane into the ship, killing 393 Americans in the worst suicide attack against America until September 11.
