Cryptography and Cryptanalysis in MATLAB Marius Iulian Mihailescu, Stefania Loredana Nita, 2021-09-26 Master the

essentials of cryptography and cryptanalysis and learn how to put them to practical use Each chapter of this book starts with an introduction to the concepts on which cryptographic algorithms are based and how they are used in practice providing fully working examples for each of the algorithms presented Implementation sections will guide you through the entire process of writing your own applications and programs using MATLAB Cryptography and Cryptanalysis in MATLAB will serve as your definitive go to cryptography reference whether you are a student professional developer or researcher showing how a multitude of cryptographic challenges can be overcome using the powerful tools of MATLAB What You Will Learn Discover MATLAB's cryptography functions Work with conversion mechanisms in MATLAB Implement cryptographic algorithms using arithmetic operations Understand the classical simple cryptosystems that form the basis of modern cryptography Develop fully working solutions encryption decryption operations Study pseudo random generators and their real life implementations Utilize hash functions by way of practical examples Implement solutions to defend against practical cryptanalysis methods and attacks Understand asymmetric and symmetric encryption systems and how to use them Leverage visual cryptography steganography and chaos based cryptography Who This Book Is For Those who are new to cryptography analysis Some prior exposure to MATLAB recommended

MATLAB Implementation of the Steganographic Algorithm F5 Wassim Al Chamaa, 2019-05-07 Project Report from the year 2018 in the subject Computer Science Programming language English

abstract The F5 algorithm proposed by Westfeld is still one of the most known algorithms in the field of DCT based steganography It can make a JPEG image a container of a secret message where no one knows the presence of the message except the sender and the intended receiver In this programming work we show how to realize the F5 algorithm via Matlab We present the block diagrams of embedding and extracting processes and the entire Matlab code of the F5 algorithm

Some Notes about the F5 Matlab code

- 1 The implementation code works according to the method proposed by Andreas Westfeld in his paper F5 A Steganographic Algorithm High Capacity Despite Better Steganalysis Huffman coding and decoding are implemented using the Matlab JPEG Toolbox developed by Phil Sallee
- 2 The two part Matlab code included in the report embedding and extracting parts can be executed in Matlab IDE The embedding part reads the cover JPEG file and the message file we want to hide then it creates a Stego JPEG file according to the F5 algorithm On the other side The extracting part reads the Stego JPEG file and then it extracts the hidden message file
- 3 The F5 code calls the main two functions of Phil Sallee's Matlab Toolbox JPEG reading and writing These functions make it easier to access and manipulate the quantized DCT coefficients of a given JPEG file Using Sallee's Toolbox should accord with the used operating system whether it is 32 or 64 bits
- 4 The F5 code contains the function to form the image matrix to show the input and output images Running this function requires ALL the Sallee's Toolbox to be installed Otherwise the user can REMOVE this function from the code since it doesn't affect the main F5 process and thus keep ONLY using the main two function of the Sallee's Toolbox
- 5 The message file we want to hide can be any file of any kind and whatever its extension The size of the message file should be appropriate

for the size of the used cover JPEG image so no errors will occur when executed
