You'll also find an all-new glossary plus up-to-the-minute DBA rules of thumb. [Secure Data Management](#) Willem Jonker, Milan Petkovic, 2008-08-18 Information and communication technologies are advancing fast. Processing speed is still increasing at a high rate, followed by advances in digital storage technology which double storage capacity every year. Furthermore, communication technologies do not lag behind. The Internet has been widely used, as well as wireless technologies. With a few mouse clicks, people can communicate with each other around the world. All these advances have great potential to change the way people live, introducing new concepts like ubiquitous computing and ambient intelligence. Technology is becoming present everywhere in the form of smart and sensitive computing devices. They are nonintrusive, transparent, and hidden in the background, but they collect, process, and share all kinds of information, including user behavior, in order to act in an intelligent and adaptive way. These emerging technologies put new requirements on security and data management. As data are accessible anytime, anywhere, it becomes much easier to

get unauthorized data access Furthermore the use of new technologies has brought about some privacy concerns It becomes simpler to collect store and search personal information thereby endangering people s privacy Therefore research in secure data management is gaining importance attracting the attention of both the data management and the security research communities The interesting problems range from traditional topics such as access control and general database security via privacy protection to new research directions such as cryptographically enforced access control Research Trends in Geographic Information Science Gerhard Navratil,2009-06-17 In June July 2008 the Institute for Geoinformation and Cartography at the Vienna University of Technology organized a scientific colloquium in this city where 15 well known scientists presented their ideas on research for the upcoming decade This book contains papers prepared by the participants as well as by other researchers The eighteen papers in this book reflect the opinion of a core group of Geoinformation scientists about future research topics Dealing with these topics poses multiple research questions for the coming years
