Guide Monkeys For The Blind:

A Guide to Planning and Support for Individuals Who Are Deafblind John McInnes, 1999-12-15 In this ground breaking collection leading experts in the field address the problems of parents intervenors and professionals who work with people who have been deafblind since birth or from a very early age Individuals who are congenitally deafblind face the same challenges as those who become deafblind later in life but they have not had the same opportunity to develop the communications skills and a conceptual base needed to construct an understanding of the world The contributors address identification of deafblindness planning and intervention development family support and education Just as McInnes and Treffry s *Deafblind Infants and Children* helped to change the approach to and the perception of deafblind children this collection will assist in fostering a new approach to the education of and support for older children youth and adults who are deafblind An essential part of this process is to set forth standards for program development implementation and evaluation which this volume aims to accomplish It will make an essential contribution to the expanding field of services for the deafblind population of all ages and to the improved understanding of parents family members and professionals who support them

The Visual Brain in Action David Milner, Mel Goodale, 2006-10-12 First published in 1995 this book presents a model for understanding the visual processing underlying perception and action proposing a broad distinction within the brain between two kinds of vision conscious perception and unconscious online vision **Department of Veterans Affairs Health Care Research** United States. Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain s activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the *Oxford Companion to Consciousness* is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so

reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon

Geschwind, 2012-12-06 Philosophers of science work not only with the methods of the sciences but with their contents as well Substantive issues concerning the relation between mind and matter between the material basis and the functions of cognition have been central within the entire history of philosophy We recall such philosophers as Aristotle Descartes the early Kant Ernst Mach and the early William James as directly inquiring of the organs and structures of thinking Science and its philosophical self criticism are especially and deeply united in the effort to understand the biological brain and human behavior and so it requires no apology to include this collection of clinical studies among Boston Studies in the Philosophy of Science The work of Dr Norman Geschwind well represented in this selection explores the relation between structure and function between the anatomy of the brain and the higher behavior of men and women As a clinical neurologist Geschwind was led to these studies particularly by his interest in those pathologies which have to do with human perception and language His research into the anatomical substrates of specific disorders and strikingly the aphasias present a fascinating and provocative examination of fundamental questions which will concern not neurologists alone but also psychologists physicians linguists speech pathologists educators anthropologists historians of medicine and philosophers among others namely all those interested in the characteristic modes of human activity in speech in perception and in the learning process generally
