Bezançon,2014-09-04 Les prouesses architecturales de notre XXI^e siècle reposent sur des inventions dont beaucoup remontent aux deux siècles précédents. On les doit aussi à la première des ingénieurs et des constructeurs qui les ont mises en œuvre. En voici l'histoire. Notre environnement actuel porte l'empreinte visible de ce qu'engendra la Révolution industrielle dans le secteur de la construction : tout de l'embellissement alors contesté qu'est devenue la Tour Eiffel, ce sont en effet les chemins de fer et l'ensemble des transports publics qui illustrent aujourd'hui encore la préminence de la construction métallique au XIX^e siècle. Cet aspect masque toutefois d'autres innovations aussi décisives que déterminantes comme la mise au point des ciments modernes et la naissance de ce matériau qui allait caractériser la construction au XX^e siècle partout dans le monde : le béton. Oeuvre d'ingénieurs français, ces inventions ont eu des conséquences économiques et sociales dont on a peine à mesurer l'ampleur tant elles restent indissociables de la croissance démographique et de l'emballement des techniques. Les dimensions multiples et d'apparence parfois contradictoires de cette histoire dont nous sommes tous moins ouverts à nommer communément industrie. Depuis l'aube du XIX^e siècle jusqu'à nos jours, la fabrication du bâtiment s'est progressivement industrialisée et au même titre que la construction des machines et la production des biens de consommation. Souvent associée à la construction métallique, le béton armé permettra enfin d'offrir parfois en un temps record des ouvrages d'art, des locaux industriels et des bâtiments d'habitation ou de bureaux dont la taille et les capacités insoupçonnées ont été rendues possibles par l'inventivité des ingénieurs et l'audace des architectes. Dans ce mouvement de très grandes entreprises se sont développées et exportées ce savoir-faire dans le monde entier. Les villes nouvelles et les tours de grande hauteur, les ponts et les viaducs, les tunnels et les barrages, mais aussi la réhabilitation des nombreux bâtiments historiques et les innovations touchant au développement durable. L'inventaire est considérable. Ce grand livre illustré de plus de 700 images et documents nous invite à effectuer un parcours sur mesure où l'on pourra même apprendre le savoir et le plaisir. On trouvera sur le premier rabat une présentation de Xavier Bezançon et Daniel Devillebichot, les deux auteurs du présent ouvrage.

International Du Froid ,2008 Steel Fibre Reinforced Concrete Xavier Destrée,2025-04-25 Steel fiber reinforced concrete SFRC for structures dates back to 1925 yet it remains largely unknown to many engineers and contractors. Essential information is often buried in codes, reports and standards. This book presents the essential information required by engineers to utilize SFRC effectively achieving superior results across a range of applications. The focus is on its most common use in flat horizontal cast-in-situ applications such as ground bearing slabs, ground suspended slabs, suspended elevated slabs and raft slab foundations for buildings which present more opportunities than three-dimensional structures. Prefabrication and paving are discussed where they intersect with these main applications. Material and structural testing are

addressed to guide the design for these typical applications with attention also given to shrinkage cracking fire resistance of slabs and walls and environmental benefits alongside future opportunities and challenges This unique book provides simple practical guidance for designing and placing SFRC It is especially helpful for design and build contractors and professional engineers It offers simple tools and methods to launch a project **Travaux** ,1991 Catalogue des publications éditées par les Journaux officiels France.
