Overall studies have shown that a decrease in the amount of whole grains in the modern diet is related to a corresponding increase in health problems that are attributed to this all too common dietary imbalance. The resulting health issues associated with an over processed diet which provides inadequate levels of nutrients from whole grains may include obesity, diabetes, high blood lipids, chronic inflammatory states, and an excess of oxidative stress. Strength and endurance may also suffer as a result of these nutrient deficiencies followed by declines in energy and immunity. Saves researchers and clinicians time in quickly accessing the latest details on a broad range of nutritional and epidemiological issues. Provides a common language for nutritionists, nutrition researchers, epidemiologists, and dietitians to discuss how the action of wheat and rice protect against disease and modify human health. Preclinical, clinical, and population studies help nutritionists, dietitians, and clinicians map out key areas for research and further clinical recommendations.
