Lawrence A. Tomei,James A. Bernauer,Anthony Moretti,2016-09-23 Developing a Center for Teaching Excellence A Case Study Using the Integrated Readiness Matrix builds on the 2015 text Integrating Pedagogy and Technology Improving Teaching and Learning in Higher Education with a focus on teaching in higher education Developing a Center for Teaching Excellence is premised on our contention in the first book that while individual faculty members can independently begin to use the IRM to improve their pedagogical and technological skills in their content areas an organizational structure is needed to sustain ongoing improvement In addition while the first book provided a primer on learning theory as it relates to pedagogy Developing a Center for Teaching Excellence plumbs this topic more deeply from the perspective of the college instructor Further the second book is dedicated to demonstrating how the IRM can be institutionalized as the foundation for providing the structure and support to faculty and how they can help shape centers for teaching excellence by becoming more familiar with relevant learning theories and related pedagogical and technological approaches Teaching Global History Alan J. Singer,2012-04-27 Teaching Global History challenges prospective and beginning social studies teachers to formulate their own views about what is important to know in global history and why It explains how to organize the curriculum around broad social studies concepts and themes and student questions about humanity history and the contemporary world All chapters include lesson ideas a sample lesson plan with activity sheets primary source documents and helpful charts graphs photographs and maps High school students responses are woven in throughout Additional material corresponding to each chapter is posted online at http://people.hofstra.edu/alan_j_singer The traditional curriculum tends to highlight the Western heritage and to race through epochs and regions leaving little time for an in depth exploration of concepts and historical themes for the evaluation of primary and secondary sources and for students to draw their own historical conclusions Offering an alternative to such pre packaged textbook outlines and materials this text is a powerful resource for promoting thoughtful reflection and debate about what the global history curriculum should be and how to teach it Connecting Science and Engineering Education Practices in Meaningful Ways Leonard A. Annetta,James Minogue,2016-03-02 The need for a scientifically literate citizenry one that is able to think critically and engage productively in the engineering design process has never been greater By raising engineering design to the same level as scientific inquiry the Next Generation Science Standards NGSS have signaled their commitment to the integration of engineering design into the fabric of science education This call has raised many critical questions How well do these new standards represent what actually engineers do Where do the deep connections among science and engineering practices lie To what extent can or even should science and engineering practices co exist in formal and informal educational spaces Which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering practices What science important content may be pushed aside This book tackles many of these tough questions head on All of the contributing

authors consider the same core question Given the rapidly changing landscape of science education including the elevated status of engineering design what are the best approaches to the effective integration of the science and engineering practices They answered with rich descriptions of pioneering approaches critical insights and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically literate citizenry This collection of work builds traversable bridges across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways
