Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged women. The study was a randomized controlled trial. The intervention group (IG) participated in a 12-week training program, while the control group (CG) remained sedentary. The IG showed significant improvements in physical fitness and HRQL compared to the CG. The results suggest that a 12-week training program can improve physical fitness and HRQL in sedentary, middle-aged women.
