Duncan, David H. Johnson, Thomas H. Nicholls, 1997 **General Technical Report NC.**, 1981 The Vatican and Catholic Activism in Mexico and Chile Stephen J. C. Andes, 2014-02-20 As in Europe secular nation building in Latin America challenged the traditional authority of the Roman Catholic Church in the early twentieth century In response Catholic social and political movements sought to contest state led secularisation and provide an answer to the social question the complex set of problems associated with urbanisation industrialisation and poverty As Catholics mobilised against the secular threat they also struggled with each other to define the proper role of the Church in the public sphere This study utilizes recently opened files at the Vatican pertaining to Mexico s post revolutionary Church state conflict known as the Cristero Rebellion 1926 1929 However looking beyond Mexico s exceptional case the work employs a transnational framework enabling a better understanding of the supranational relationship between Latin American Catholic activists and the Vatican To capture this world historical context Andes compares Mexico to Chile s own experience of religious conflict Unlike past scholarship which has focused almost exclusively on local conditions Andes seeks to answer how diverse national visions of Catholicism responded to papal attempts to centralize its authority and universalize Church practices worldwide The Politics of Transnational Catholicism applies research on the interwar papacy which is almost exclusively European in outlook to a Latin American context The national cases presented illuminate how Catholicism shaped public life in Latin America as the Vatican sought to define Catholic participation in Mexican and Chilean national politics It reveals that Catholic activism directly influenced the development of new political movements such as Christian Democracy which remained central to political life in the region for the remainder of the twentieth century **Design Methodologies for Space Transportation Systems** Walter Edward Hammond, 2001 Annotation Design Methodologies for Space Transportation Systems is a sequel to the author s earlier text Space Transportation A Systems Approach to Analysis and Design Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis Individual chapters are devoted to specific disciplines such as aerodynamics aerothermal analysis structures materials propulsion flight mechanics and trajectories avionics and computers and control systems The final chapters deal with human factors payload launch and mission operations safety and mission assurance The two texts by the author provide a valuable source of information for the space transportation community of designers operators and managers A companion CD ROM succinctly packages some oversized figures and tables resources for systems
