Hazardous Material (HAZMAT) Life Cycle Management Robert Jaffin, 2012-12-12 It is well known that fluorescent light bulbs and consumer appliances such as televisions computers and monitors contain mercury dangerous chemicals and other harmful components The existing literature on hazardous materials addresses the risks attached to specific materials and emphasizes compliance and personal protective equipment PPE but not the life cycle management of the materials that represent the hazards A logistics treatment of the subject is needed to understand the underlying supply chain management principles and apply solutions to reduce overall use of hazardous materials Hazardous Material HAZMAT Life Cycle Management Corporate Community and Organizational Planning and Preparedness is organized into two thematic sections Section I defines and classifies hazardous materials and covers the U S regulatory framework and standards governing the transport and use of such materials Section II examines institutional and organizational program elements and provides guidelines for developing these programs to reduce liability and risk while lowering point source pollution and total hazardous waste production The logistics approach to hazardous materials yields exponential benefits in costs and the reduction or elimination of such materials It limits organizational liability and at the same time reduces the costs associated with hazardous waste management and disposal This book serves as an integrative reference offering a better understanding of hazardous materials use life cycle management consumption and waste reduction at a holistic strategic level
