Singh, 2025-02-26 The Handbook of Applied Hydrologic and Water Resources Engineering examines the planning and design of water supply systems flood control works drought mitigation measures navigation facilities and hydraulic structures as well as feasibility and environmental impact studies for various water related projects It is based on the experience gained through consultancy in dealing with various water resources issues and problems teaching and research It serves as a useful resource for graduate students and faculty members in civil engineering agricultural engineering and water resources engineering as well as practicing engineers working in civil environmental and agricultural fields **Green Stormwater**

Infrastructure Fundamentals and Design Allen P. Davis, William F. Hunt, Robert G. Traver, 2022-06-07 Green Stormwater Infrastructure Fundamentals and Design Discover novel stormwater control measures to make for a greener tomorrow The protection of our aquatic resources is growing in importance as the effects of climate change and continued urbanization are felt throughout the world While most rain that falls onto vegetated spaces infiltrates the soil rain that falls onto impervious surfaces will not increasing downstream flooding and erosion and causing impaired water quality Impervious surfaces such as road infrastructure rooftops and parking areas all increase runoff and mobilize many pollutants that have deposited on these surfaces that are then carried into our waterways Proper management of this stormwater through green infrastructure is essential to address these challenges and reduce the environmental and ecological impacts brought about by this runoff This book brings into focus resilient stormwater control measures SCMs for the reduction of stormwater flows and associated pollutants that can detrimentally impact our local environmental and ecological systems These interventions are green infrastructure based utilizing natural hydrologic and environmental features using soil and vegetation to manage stormwater These technologies include water harvesting bioretention and bioinfiltration vegetated swales and filter strips permeable pavements sand filters green roofs and stormwater wetlands among others The basic science and engineering of these

technologies is discussed including performance information and best maintenance practices Green Stormwater Infrastructure readers will also find Research informed resilient SCM design fundamentals Diagrams developed by the authors to enhance understanding Case studies to illustrate the points elucidated in the book End of chapter problems with a separate solutions manual Green Stormwater Infrastructure is an ideal resource for environmental civil and biological engineers and environmental scientists in the consulting field Landscape architects managers and engineers of watershed districts and members of federal state and local governmental agencies especially those in the departments of environmental protection and transportation will find many uses for this guidebook It will also be of interest to professors upper level undergraduates and graduate students in environmental civil and biological engineering programs

Advances in Hydroinformatics Philippe Gourbesville, Guy Caignaert, 2020-07-25 This book features a collection of extended papers based on presentations given at the SimHydro 2019 conference held in Sophia Antipolis in June 2019 with the support of French Hydrotechnic Society SHF focusing on Which models for extreme situations and crisis management Hydraulics and related disciplines are frequently applied in extreme situations that need to be understood accurately before implementing actions and defining appropriate mitigation measures However in such situations currently used models may be partly irrelevant due to factors like the new physical phenomena involved the scale of the

processes and the hypothesis included in the different numerical tools The availability of computational resources and new capacities like GPU offers modellers the opportunity to explore various approaches to provide information for decision makers At the same time the topic of crisis management has sparked interest from stakeholders who need to share a common understanding of a situation Hydroinformatics tools can provide essential information in crises however the design and integration of models in decision support systems require further development and the engagement of various communities such as first responders In this context methodologies guidelines and standards are more and more in demand in order to ensure that the systems developed are efficient and sustainable Exploring both the limitations and performance of current models this book presents the latest developments based on new numerical schemes high performance computing multiphysics and multiscale methods as well as better integration of field scale model data As such it will appeal to practitioners stakeholders researchers and engineers active in this field
