Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter

Colorimetry and Image Processing Carlos Travieso-Gonzalez, 2018-01-24 Nowadays the technological advances allow developing many applications in different fields In the book Colorimetry and Image Processing two important fields are presented colorimetry and image processing Colorimetry is observed by a visual interactive programming learning system an approach based on color analysis of Habanero chili pepper an approach based on scene image segmentation centered on mathematical morphology other systems based on the simulations of the dichromatic color appearance and finally an approach based on the color reconstruction in order to enhance it using super resolution methods On the other hand image processing is shown by pansharpening algorithms for hyperspectral images an approach based on the analysis of the low resolution satellite images and ground based sky camera for estimating the cloud motion a hybrid super resolution framework that combines desirable features of TV and PM models a study of the real time video analysis used for anthropometric measurements on agricultural
