Health and Medical Aspects of Disaster Preparedness John C. Duffy, 2012-12-06 The study of Health and Medical Aspects of Disaster Preparedness was approved by NATO CCMS in 1985 with the first pilot study meeting in June of that year The pilot study under the leadership of the United States and Belgium focused on the current status of disaster preparedness in participating nations An objective look was taken at the availability of resources to cope with disasters from an international standpoint The types of disaster settings that were reviewed in the study included the following 1 Earthquakes floods hurricanes avalanches 2 Nuclear power plant accidents or spills 3 Water and aircraft accidents 4 Building fires building collapses 5 Contamination by hazardous chemicals or biological waste 6 Civil disturbances A disaster can strike anywhere at any time Some nations and local communities have well developed disaster plans with which to meet catastrophic situations The fact is that most communities are without written and coordinated disaster plans which offer their citizens the most effective and comprehensive protection in these unexpected and often critical situations Disaster has been defined as a sudden event which involves large numbers of people and results in loss of life serious injury and property loss together with a severe disruption of community organization and services In the United States thousands of people are killed and injured in disasters every year Thus disasters constitute a serious problem in both individual and public health terms in this country alone Disasters can be classified as natural and man made

Chemical Spills and Emergency Management at Sea P. Bockholts, I. Heidebrink, 2012-12-06 International shipping is of great importance for the transport of a great many types of cargo Substances and products considered dangerous constitute almost 50% of all the payload It is obvious that stringent regulations are required in order to minimize the risks of accidents These regulations which are derived from good practice and which are based on research have been adopted by a great number of countries However emergencies do occur in spite of all precautions Such emergencies require fast and adequate response in order to confine the consequences for man and

his environment to a minimum Emergency response has political legal financial and technical aspects This makes decision making extremely difficult The papers carefully prepared and assembled in this book present an up to date picture of today s achievements knowledge and difficulties that are being faced It was the intention of Oilchem Recovery Denmark and TNO to bring the wide scatter of aspects together in a joined perspective We also intended to spread the information on latest developments among the many people who are involved in combating calamities and in particular in decision making Finally we hope that this conference may help all of us to come to a safer transport of chemicals and a better aquatic environment We thank all the authors for their magnificent contribution
