

2. The following table gives the number of hours it takes in the United States and Canada, using the same amount of resources, to produce a ton of wheat or one bolt of cloth.

	Wheat	Cloth
United States	1 hour	2 hours
Canada	3 hours	4 hours

- (A) *(The United States / Canada) has an absolute advantage in the production of wheat.*
- (B) *(The United States / Canada) has an absolute advantage in the production of cloth.*
- (C) *(The United States / Canada) has a comparative advantage in the production of wheat because the opportunity cost of producing wheat is less than for Canada.*
- (D) *(The United States / Canada) has a comparative advantage in the production of cloth because the opportunity cost of producing cloth is less than for the United States.*
- (E) *Based only on the data above and comparative advantage considerations, the United States should specialize in (wheat / cloth).*
- (F) *Based only on the data above and comparative advantage considerations, Canada should specialize in (wheat / cloth).*
- (G) *Why will both Canada and the United States be better off if they specialize and trade?
Using the same resources, total output will be greater.*
- (H) *Suppose that Canada and the United States agree to specialize according to comparative advantage and to the following terms of trade: three tons of wheat for two bolts of cloth. In a production period, there are 60 hours; and before specialization, Canada produced nine tons of wheat and 8.25 bolts of cloth. After specialization and trade with the United States, Canada wants to maintain the nine tons of wheat for each production period. How many bolts of cloth will it have? What are its gains from trade? Canada initially produces 15 bolts of cloth; it will trade six bolts of cloth for nine tons of wheat. Canada will have nine bolts of cloth. It will gain .75 bolts of cloth from specialization and trade.*

Recession and Its Aftermath NMP Verma,2012-08-04 Market failure at medium intervals is inevitable in a capitalist economy Such failures may not be seriously seen in the short run because market adjusts demand through hoarding of inventory or import of required goods and services The market also adjusts demand in the long run through expansion of concerned industrial output and also by the entry of new firms The crucial variable is price which also adjusts the commodity and the labor market The problem comes when there are issues of overproduction over capacity utilization of plants over liquidation and excess supply of money change in demand because of change in tastes and habits of consumers households and the public All these create knife edge disturbances in the economy As a consequence they need adjustment through some variables such as employment and growth of population saving propensity technology exhaustion of existing inventory monetary and fiscal balancing In this volume an attempt has been made to appraise the working of a market economy where short term disturbances may occur market efficiency reduces recessionary cycle emerges and after certain fundamental measures the market recovers Starting with a brief recent history of the crisis and the recession discussions in this volume turn to how deliberations in macroeconomics yield implications for specific policies some of which have been tried and others

still to be tested Further in the volume we propose policies necessary for efficient regulation of the economic system and give a brief assessment of the extent to which global policy coordination has been mulled in policy circles even if these are not seriously practiced
