

Short-Run Phillips Curve

A.W. Phillips studied the historical relationship between the rate of change in wages and the unemployment rate in the United Kingdom. In 1958 he published his findings, showing an inverse relationship between these variables. In following studies, other economists found that the inverse relationship held when a change in the level of prices (inflation) was used in place of the rate of change in wages. In other words, when inflation increased, the unemployment rate decreased; and when inflation decreased, the unemployment rate increased. A graphic representation of this trade-off became known as the *Phillips curve*.

In Figure 46.1, an example of the Phillips curve illustrates the trade-off between inflation and unemployment, or all of the different possible combinations of inflation and unemployment that exist along the curve.

Figure 46.1
Phillips Curve

The economy of the 1960s appeared to support Phillips' hypothesis. The economy was sluggish, inflation was low and the unemployment rate was high. Since the unemployment rate was higher than the natural rate of unemployment, the economy was not operating at its potential GDP. The Phillips curve suggested to some economists that if policy makers wished to lower unemployment, the trade-off would be higher inflation.

Macroeconomics Unit 5 Lesson 3 Activity 46 Key

John S. Morton

Macroeconomics Unit 5 Lesson 3 Activity 46 Key:

Advanced Placement Economics John S. Morton, 2003 The teacher guide accompanies the student activities books in macro and microeconomics for teaching collegelevel economics in AP Economics courses The publication contains course outlines unit plans teaching instructions and answers to the student activities and sample tests
