Crystal Growth in Science and Technology H. Arend, J. Hulliger, 2012-12-06 Science and art of crystal growth represent an interdisciplinary activity based on fundamental principles of physics chemistry and crystallography Crystal growth has contributed over the years essentially to a widening of knowledge in its basic disciplines and has penetrated practically into all fields of experimental natural sciences It has acted more over in a steadily increasing manner as a link between science

and technology as can be seen best for example from the achievements in modern microelectronics The aim of the course Crystal Growth in Science and Technology being to stress the interdisciplinary character of the subject selected fundamental principles are reviewed in the following contributions and cross links between basic and applied aspects are illustrated It is a very well known fact that the intensive development of crystal growth has led to a progressive narrowing of interests in highly specialized directions which is in particular harmful to young research scientists The organizers of the course did sincerely hope that the program would help to broaden up the horizon of the participants It was equally their wish to contribute within the traditional spirit of the school of crystallography in Erice to the promotion of mutual understanding personal friendship and future collaboration between all those who were present at the school *Mergent International Manual* ,2002 **Auditing** Jack C.
