A COMMON CORE STATE STANDARD A.2

Most eighth grade mathematics curricula cover the concept of a function. This level of the progression presented in mathematics, the definition of a function is simply in the point of being really understood. Make sure to learn the following definition:

Definition: A function is any "rule" that assigns exactly one output value to each input value (number). These rules can be understood in different ways, they could consist of using equations, graphs, and tables of values. We call the input variable independent variable and output variable dependent.

Example 18: The internet music service offers a plan whereby users pay a flat monthly fee of \$9 and use their download songs for 10 songs each.

1a) What are the independent and dependent variables in this situation?

Independent: _____ Dependent: _____

1b) What variable below has a variety of independent values?

Number of Downloads, x	0	5	10	20
Amount Charged, y				

1c) Can the number of downloads be expressed by the variable x and the amount charged in dollars be expressed by the variable y ? Write an equation that models y as a function of x .

1d) Based on the equation you found in part (c), produce a graph of the function for all values of x on the interval $0 \leq x \leq 30$. Use a tabular format to generate additional coordinate pairs to the ones you found in part (b).
