Computers Supported Education Gennaro Costagliola, James Uhomoihi, Susan Zvacek, Bruce M. McLaren, 2017-08-02
This book constitutes the thoroughly refereed proceedings of the 8th International Conference on Computer Supported Education CSEDU 2016 held in Rome Italy in April 2016 The 29 revised full papers were carefully reviewed and selected from 164 submissions The papers deal with the following topics new educational environments best practices and case studies of innovative technology based learning strategies institutional policies on computer supported education including open and distance education *Entropy, Search, Complexity* Imre Csiszár, Gyula O.H. Katona, Gabor Tardos, 2007-04-05 The present volume is a collection of survey papers in the fields given in the title They summarize the latest developments in their respective areas More than half of the papers belong to search theory which lies on the borderline of mathematics and computer science information theory and combinatorics respectively The volume is slightly related to the twin conferences Search And Communication Complexity and Information Theory In Mathematics held at Balatonlelle Hungary in 2000 These conferences led us to believe that there is a need for such a collection of papers The paper written by Martin Aigner starts with the following relatively new search problem Given n boolean variables as input one has to find one of them whose value is in majority The goal is to minimize the number of tests needed for this where one test is to compare two input variables for equality The paper surveys the large set of problems and results which grew out of this one In the traditional search model an unknown element is sought in a finite set based on the information that the unknown element is or is not in some asked subsets A variant is when a 0/1 function is given on the underlying set and only the values of this function at the unknown element x is sought rather than x itself This is called the recognition problem *System Identification (SYSID '03)* Paul Van Den Hof, Bo Wahlberg, Siep Weiland, 2004-06-29 The scope of the symposium covers all major aspects of system identification experimental modelling signal processing and adaptive control ranging from theoretical methodological and scientific developments to a large variety of engineering application areas It is the intention of the organizers to promote SYSID 2003 as a meeting place where scientists and engineers from several research communities can meet to discuss issues related to these areas Relevant topics for the symposium program include Identification of linear and multivariable systems identification of nonlinear systems including neural networks identification of hybrid and distributed systems Identification for control experimental modelling in process control vibration and modal analysis model validation monitoring and fault detection signal processing and communication parameter estimation and inverse modelling statistical analysis and uncertainty bounding adaptive control and data based controller tuning learning data mining and Bayesian approaches sequential Monte Carlo methods including particle filtering applications in process control systems motion control systems robotics aerospace systems bioengineering and medical systems physical measurement systems automotive systems
