Imac User Guide 2011:

Reconfigurable Architectures and Design Automation Tools for Application-Level Network Security Sascha Mühlbach, 2015-04-30 The relevance of the Internet has dramatically grown in the past decades. However, the enormous financial impact attracts many types of criminals. Setting up proper security mechanisms, e.g., Intrusion Detection Systems (IDS), has therefore never been more important than today. To further compete with today's data transfer rates (10 to 100 Gbit/s), dedicated hardware accelerators have been proposed to offload compute-intensive tasks from general-purpose processors. As one key technology, reconfigurable hardware architectures, e.g., the Field Programmable Gate Array (FPGA), are of particular interest to this end. This work addresses the use of such FPGAs in the context of interactive communication applications, which goes beyond the regular packet-level operations often seen in this area. To support rapid prototyping, a novel FPGA platform, NetStage, has been designed and developed, which provides a communication core for Internet communication and a flexible connection bus for attaching custom applications modules. A hardware honeypot, the MalCoBox, has been set up as a proof of concept application. Furthermore, to address the ongoing issue of hardware programming complexity, the domain-specific Malacoda language for abstractly formulating honeypot packet communication dialogs is presented and discussed. An associated compiler translates Malacoda into high-performance hardware modules for NetStage. Together, NetStage and Malacoda address some of the productivity deficiencies often recognized as major hindrances for the more widespread use of reconfigurable computing in communications applications. Finally, the NetStage platform has been evaluated in a real production environment.

Mac User's Guide to Living Wirelessly Brad Miser,2005 The major force driving people to embrace wireless computing is Wi Fi Once dismissed as a fad Wi Fi is rapidly becoming ubiquitous in the US and around the world In 2004 more than half of all laptops sold in the US shipped with Wi Fi installed By 2007 most analysts predict that nearly every laptop sold in the US will include Wi Fi Nearly 20 million Wi Fi access points will be sold this year up 20% from

last year As these numbers grow prices will continue to fall making Wi Fi more attractive to more and more people By the end of this year there will be more than 40 000 hotspots public Wi Fi access points available across the US in hotels fast food restaurants caf s airports even parks By 2007 that number will surpass 100 000 From McDonald s to Kinko s to Holiday Inn Wi Fi is becoming a killer amenity Once Wi Fi networks are in place they can be used for much more than just Internet access For example the AirPort Express allows users to stream iTunes throughout their homes wirelessly Wi Fi is being used to network printers cameras and ultimately home entertainment devices
