In The Plex Book Summary:

In the Plex Steven Levy, 2011-04-12 The most interesting book ever written about Google The Washington Post delivers the inside story behind the most successful and admired technology company of our time now updated with a new Afterword Google is arguably the most important company in the world today with such pervasive influence that its name is a verb The company founded by two Stanford graduate students Larry Page and Sergey Brin has become a tech giant known the world over Since starting with its search engine Google has moved into mobile phones computer operating systems power utilities self driving cars all while remaining the most powerful company in the advertising business Granted unprecedented access to the company Levy disclosed that the key to Google's success in all these businesses lay in its engineering mindset and adoption of certain internet values such as speed openness experimentation and risk taking Levy discloses details behind Google's relationship with China including how Brin disagreed with his colleagues on the China strategy and why its social networking initiative failed the first time Google tried chasing a successful competitor He examines Google's rocky relationship with government regulators particularly in the EU and how it has responded when employees left the company for smaller nimbler start ups In the Plex is the most authoritative and in many ways the most entertaining James Gleick The New York Book Review account of Google to date and offers an instructive primer on how the minds behind the world's most influential internet company function Richard Waters The Wall Street Journal Summary of Steven Levy's In the Plex Milkyway Media, 2024-03-26 Get the Summary of Steven Levy's In the Plex in 20 minutes Please note This is a summary not the original book In the Plex delves into the intricate world of Google exploring the company's evolution from a Stanford University project to a global tech leader The book reveals the origins of Google's search engine detailing how Larry Page and Sergey Brin's innovative PageRank algorithm revolutionized the way information is accessed online It examines the challenges Google faced as it expanded its services including the controversial Book Search project which aimed to digitize the world's books but encountered legal pushback over copyright concerns **Complex Analysis** John M.

Howie, 2012-12-06 Complex analysis is one of the most attractive of all the core topics in an undergraduate mathematics course Its importance to applications means that it can be studied both from a very pure perspective and a very applied perspective This book takes account of these varying needs and backgrounds and provides a self study text for students in mathematics science and engineering Beginning with a summary of what the student needs to know at the outset it covers all the topics likely to feature in a first course in the subject including complex numbers differentiation integration Cauchy's theorem and its consequences Laurent series and the residue theorem applications of contour integration conformal mappings and harmonic functions A brief final chapter explains the Riemann hypothesis the most celebrated of all the unsolved problems in mathematics and ends with a short descriptive account of iteration Julia sets and the Mandelbrot set Clear and careful explanations are backed up with worked examples and more than 100 exercises for which full solutions are

provided Convex Analysis and Nonlinear Geometric Elliptic Equations Ilya J. Bakelman, 2012-12-06 Investigations in modern nonlinear analysis rely on ideas methods and problems from various fields of mathematics mechanics physics and other applied sciences In the second half of the twentieth century many prominent exemplary problems in nonlinear analysis were subject to intensive study and examination The united ideas and methods of differential geometry topology differential equations and functional analysis as well as other areas of research in mathematics were successfully applied towards the complete solution of complex problems in nonlinear analysis It is not possible to encompass in the scope of one book all concepts ideas methods and results related to nonlinear analysis Therefore we shall restrict ourselves in this monograph to nonlinear elliptic boundary value problems as well as global geometric problems In order that we may examine these problems we are provided with a fundamental vehicle The theory of convex bodies and hypersurfaces In this book we systematically present a series of centrally significant results obtained in the second half of the twentieth century up to the present time Particular attention is given to profound interconnections between various divisions in nonlinear analysis The theory of convex functions and bodies plays a crucial role because the ellipticity of differential equations is closely connected with the local and global convexity properties of their solutions Therefore it is necessary to have a sufficiently large amount of material devoted to the theory of convex bodies and functions and their connections with partial differential equations
